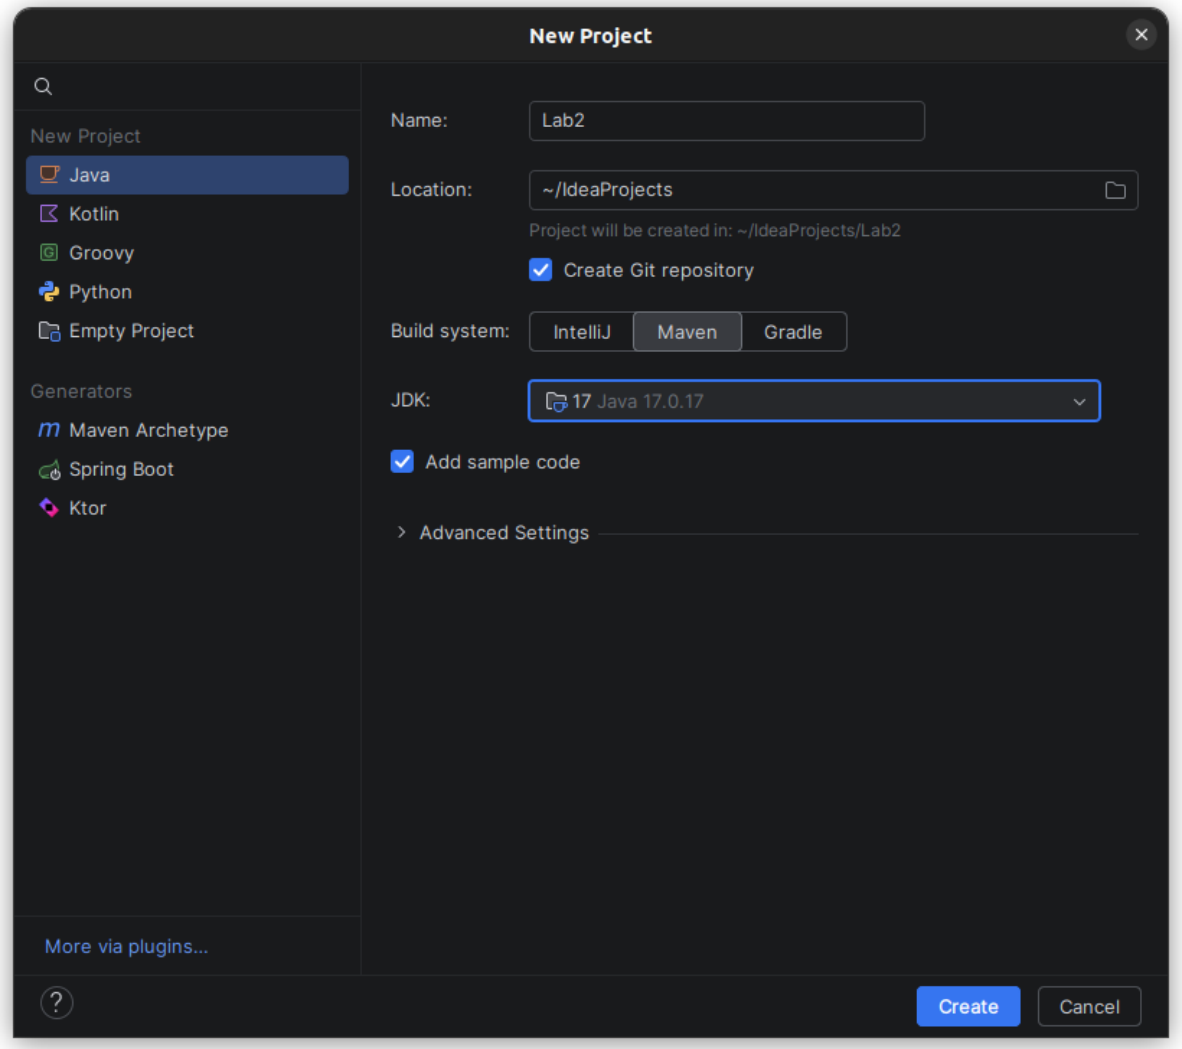
1. Create a simple java application program and push the source code to a GitHub repository. Configure Jenkins to pull the code from GitHub, execute a build, and upload screen shot of the output.

--SOL:

Intellij

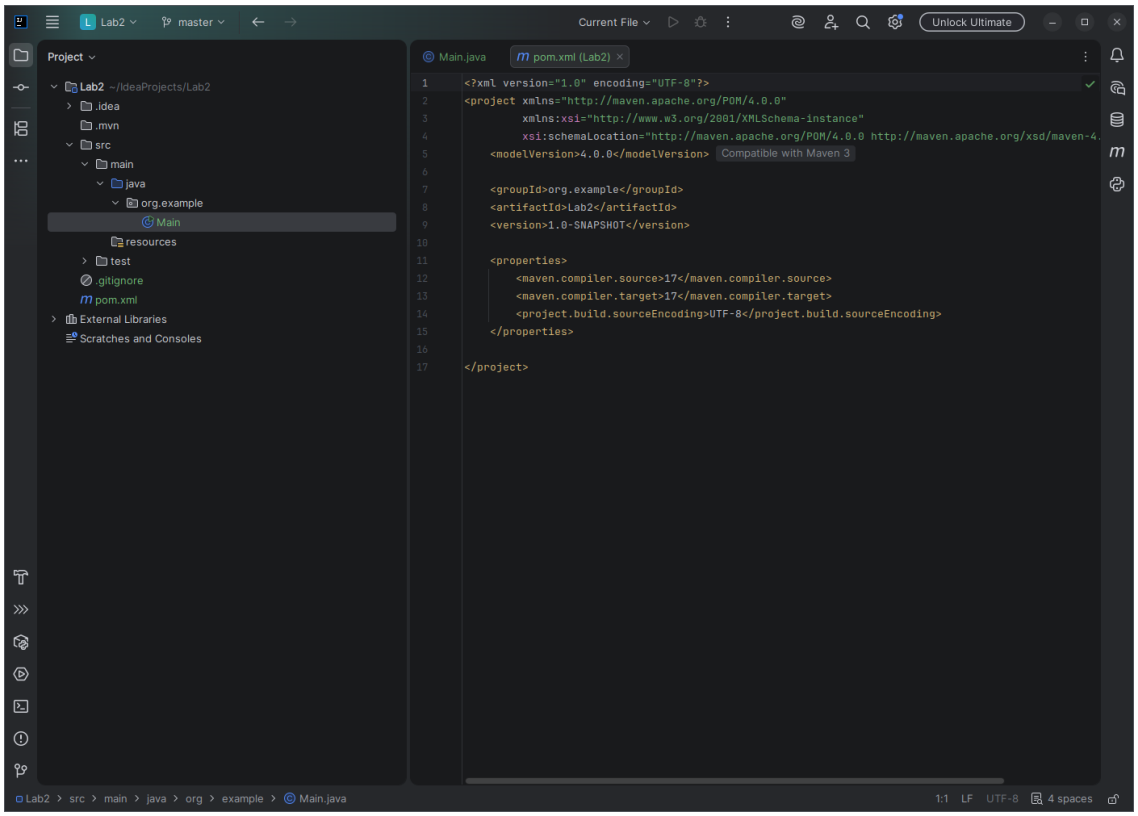
--

- Open IntelliJ and create a new maven project.

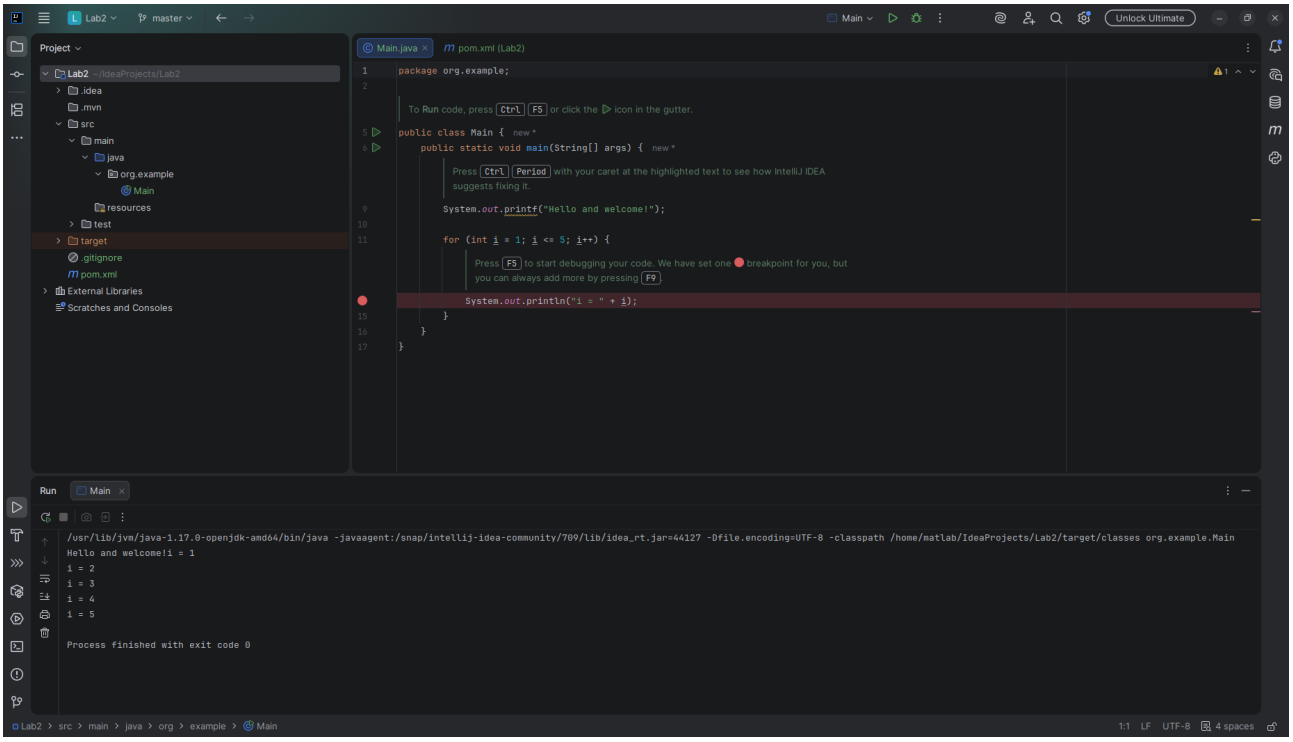


-

-Project is created.

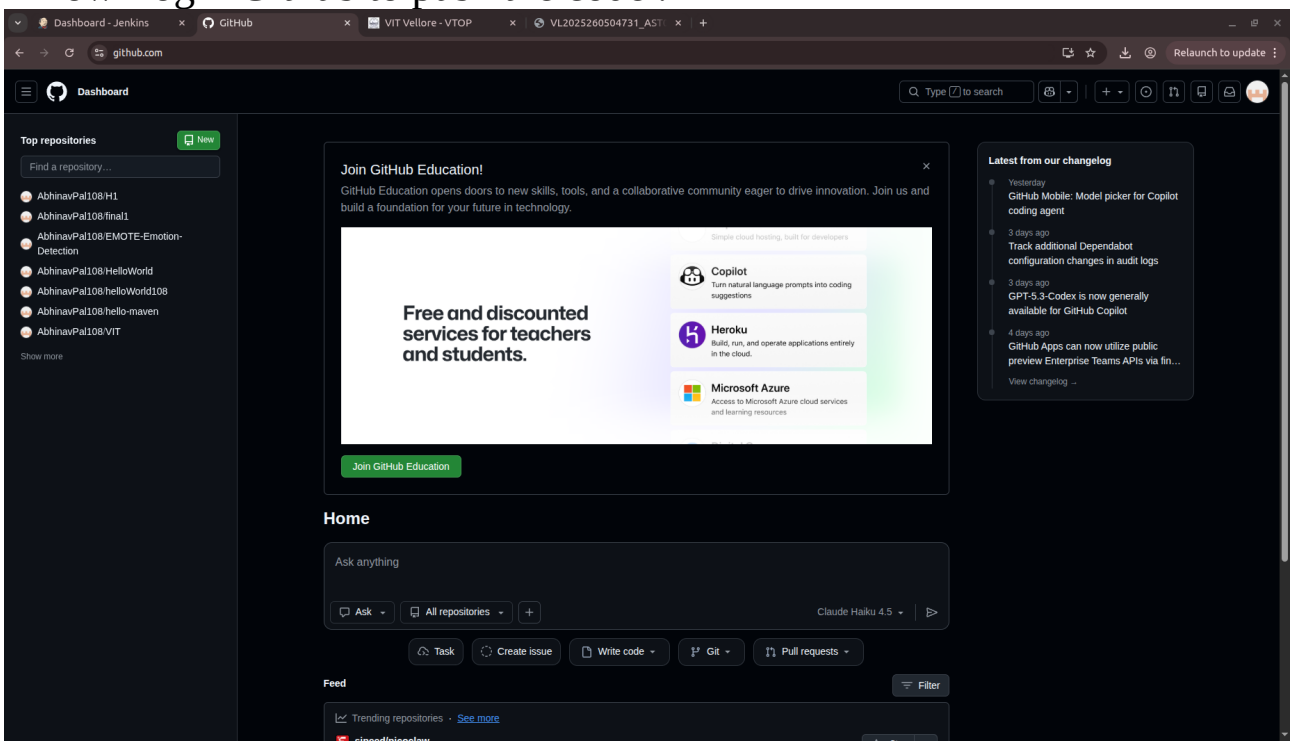


-java pgm output



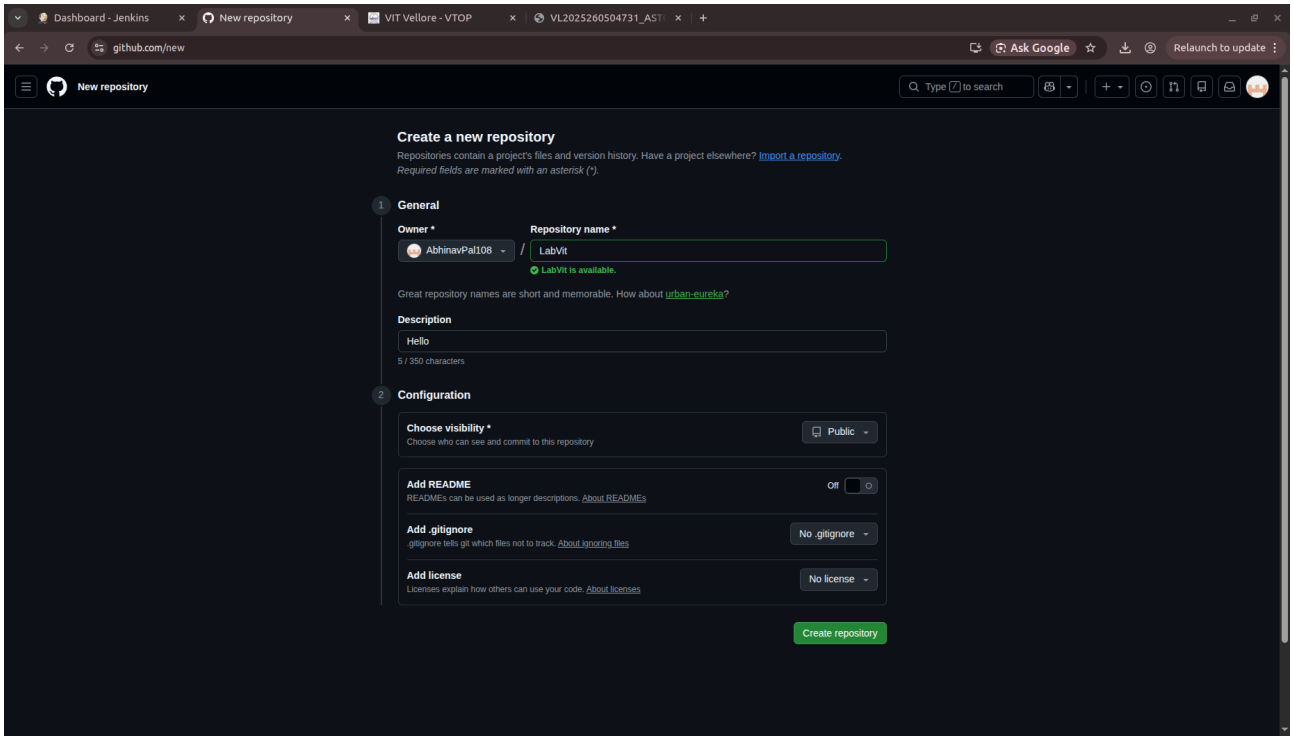
-

--Now Login Github to push the code .

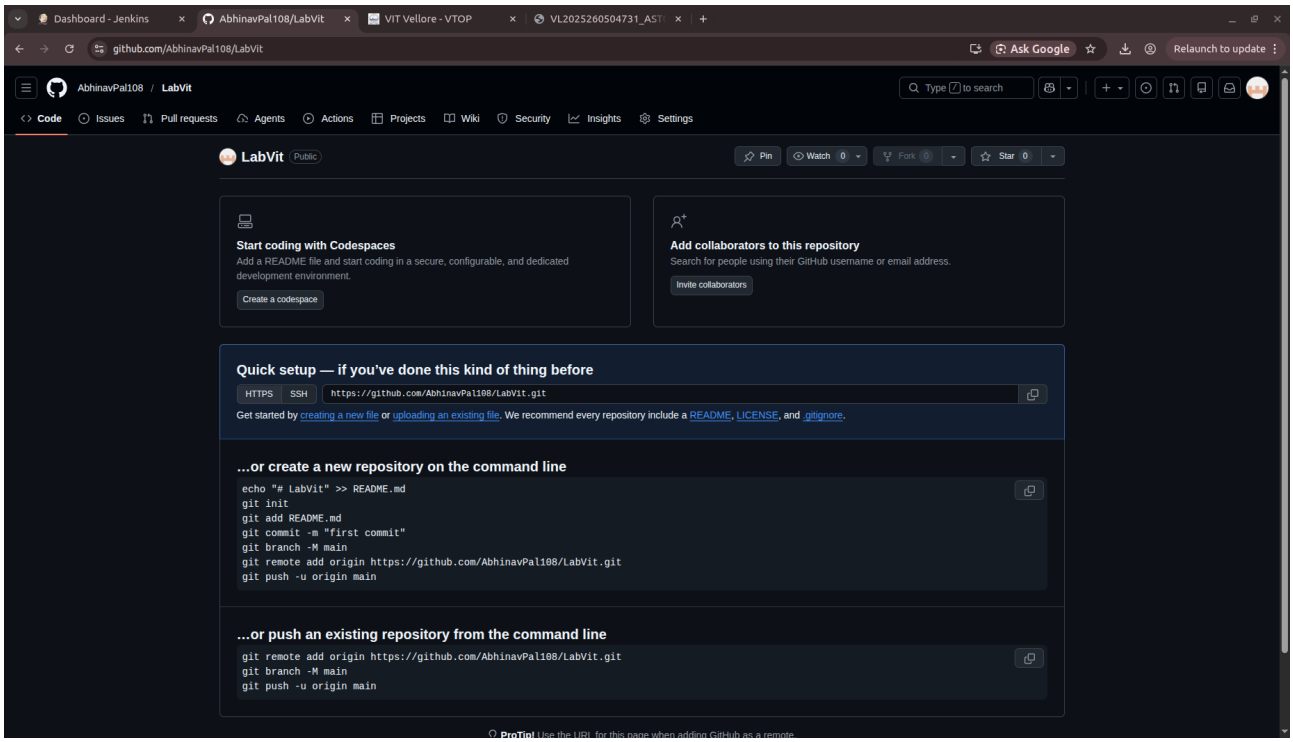


--Create a new repository.

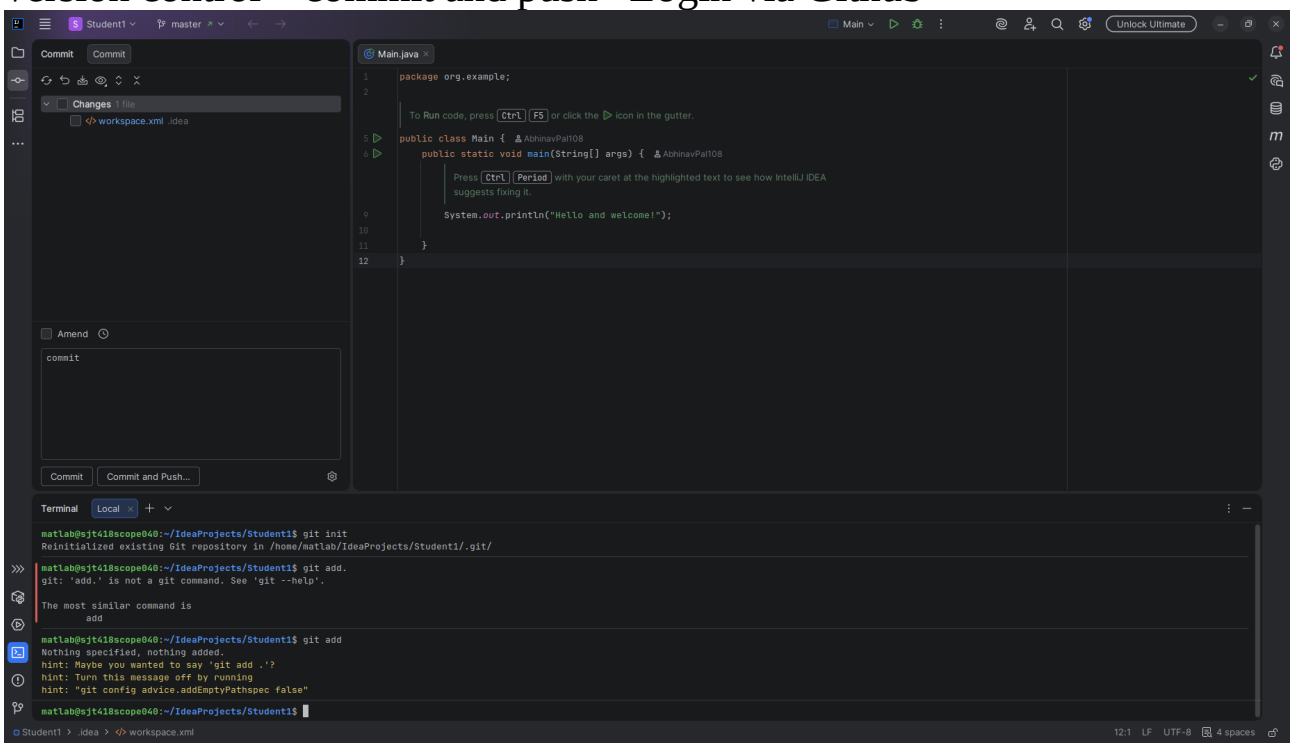
-



-- repository is created.

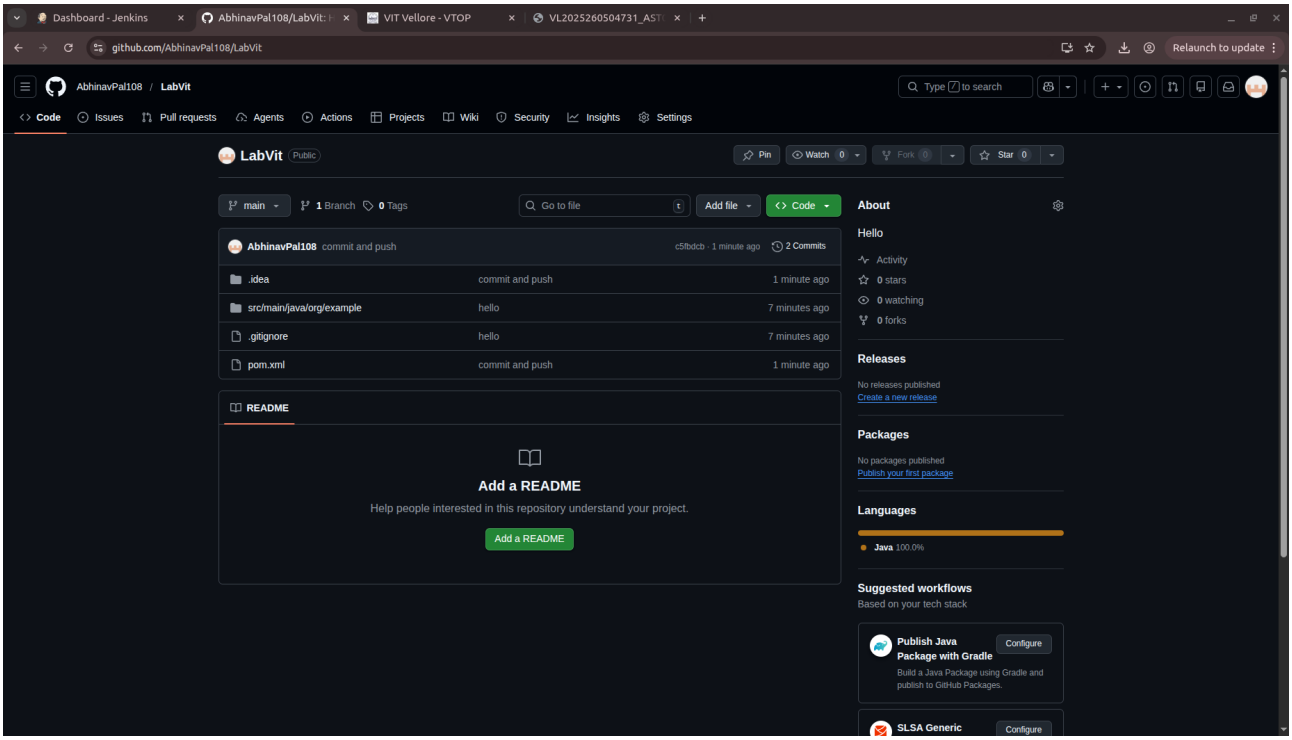


-- Now Share the project from IntelliJ Using Github Commands and version control—commit and push –Login via Github



--GitHub Commands-
git init
git add
git commit -m “hello”
git branch -M main
git remote add origin https://github.com/AbhinavPal108/LabVit.git
git push -U origin main

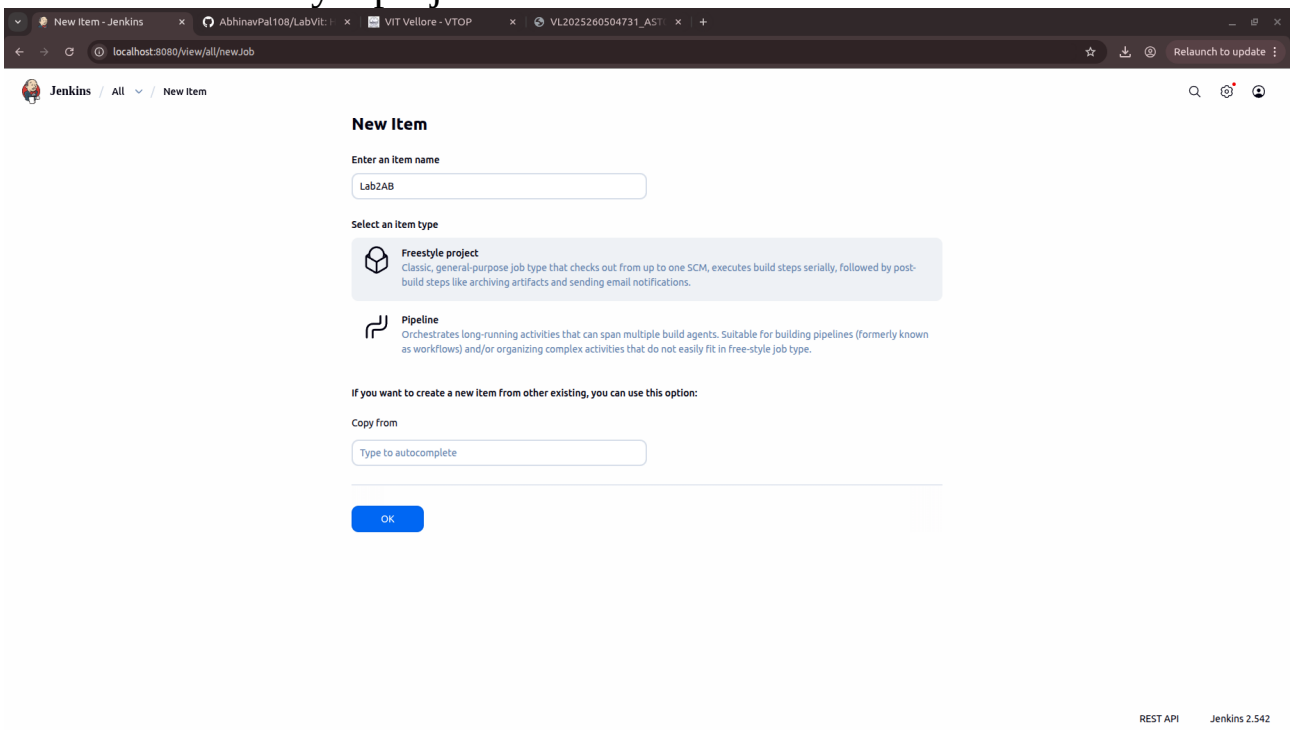
-- After Commit and push ,the project is shared to Git hub



-

--Jenkins .

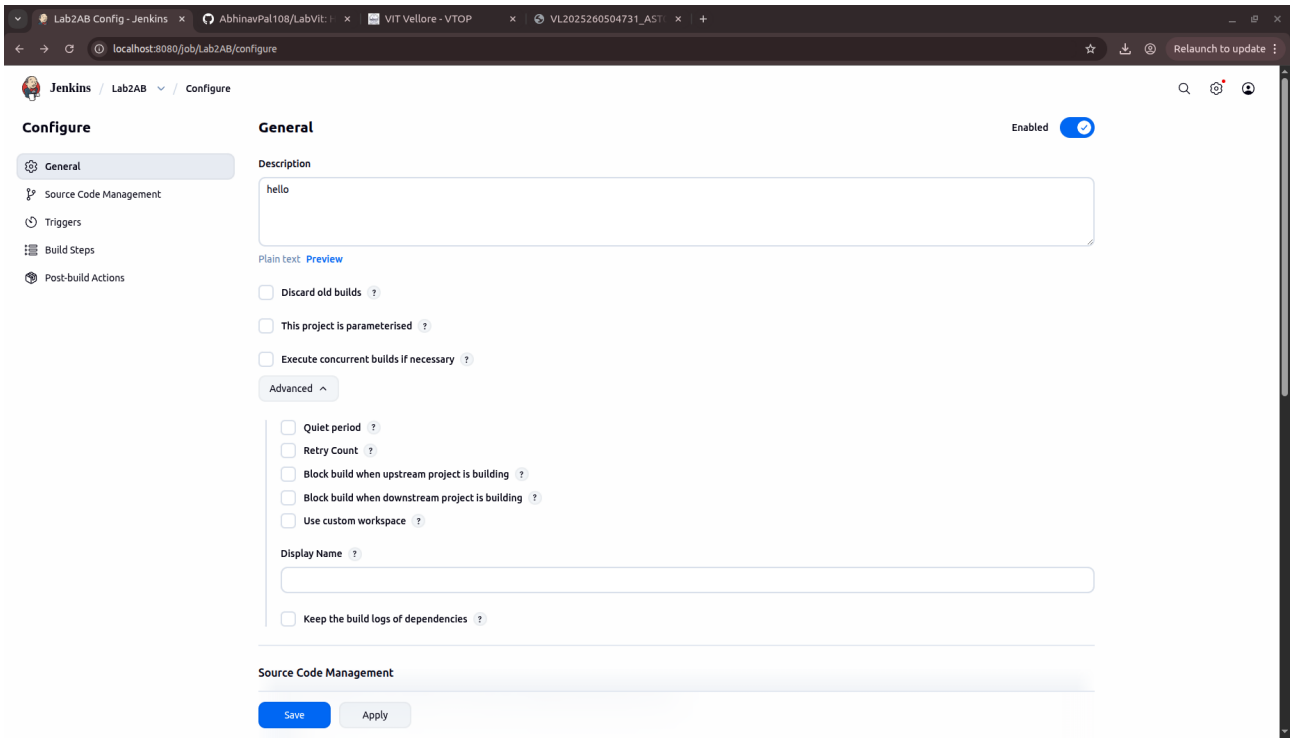
New Item – freestyle project -maven



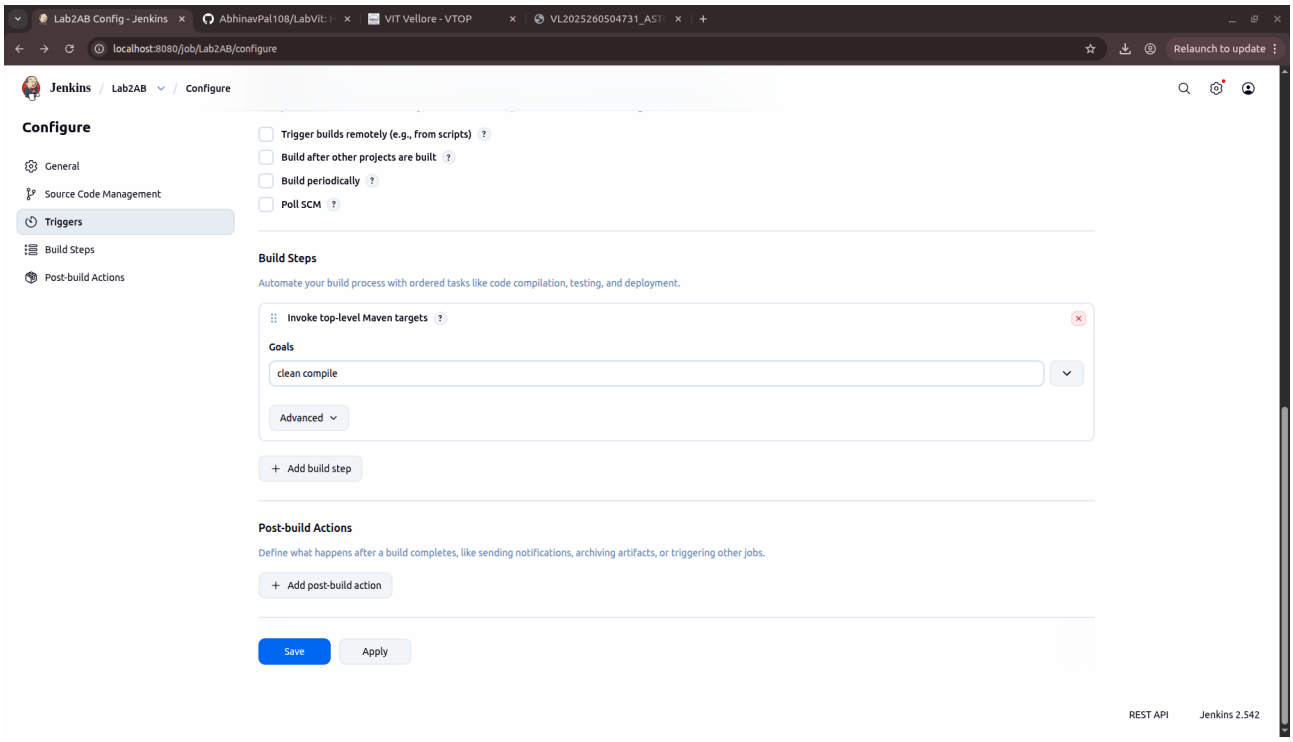
--

in Jenkins --

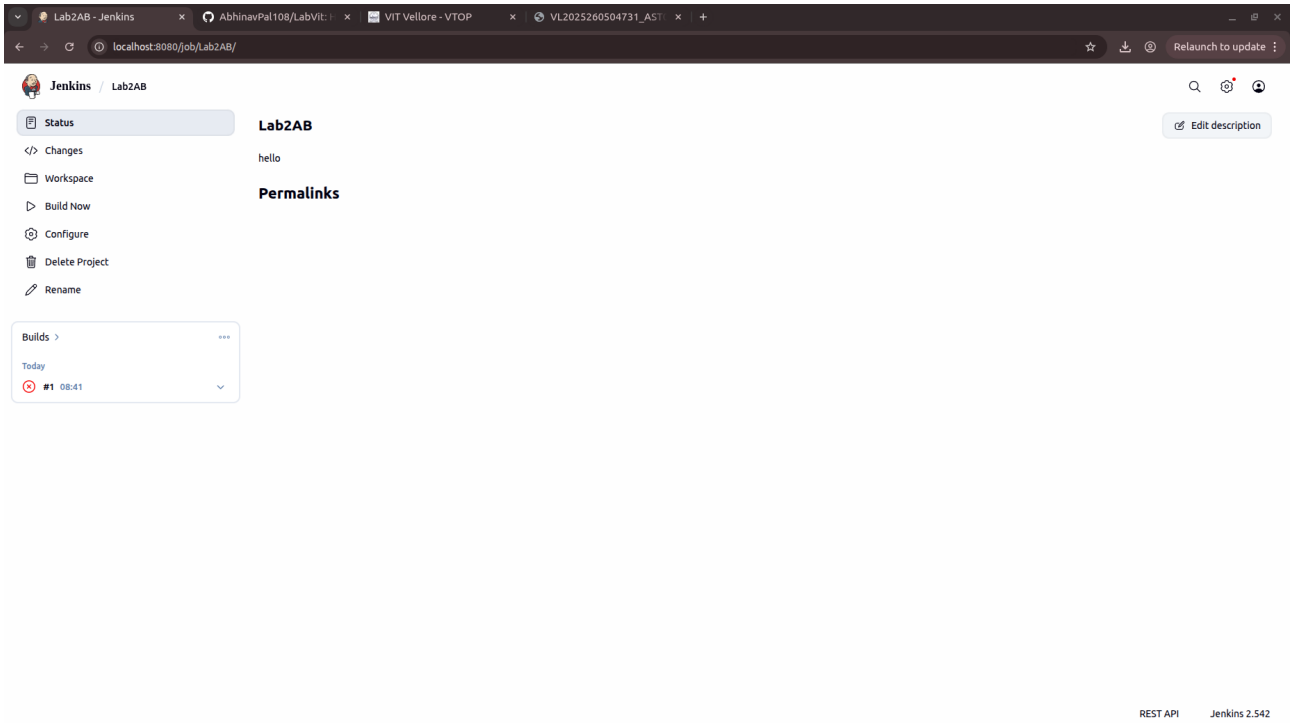
1. no maven project available
2. no git option to paste URL to pull the code and buid it.
3. Build failure is due to no proper configuration availabe in lab.



-



--



git plug in was not available.

Thank You
