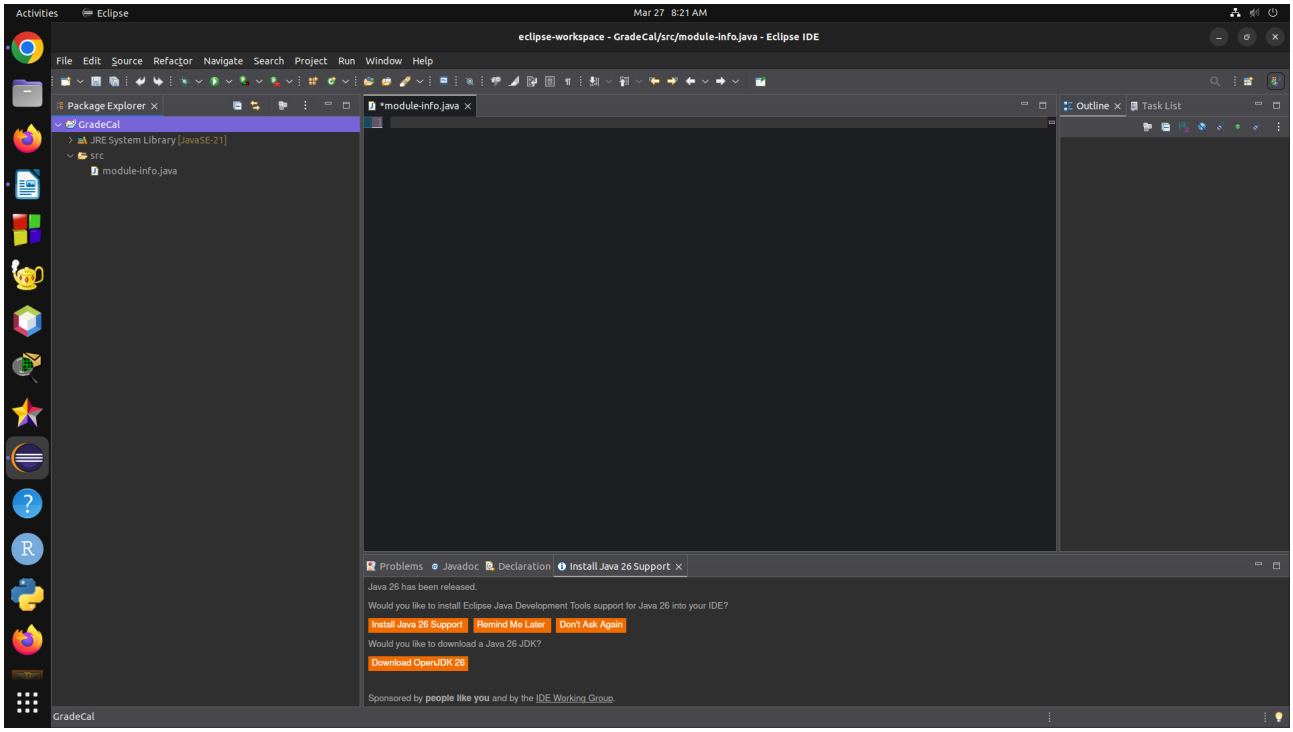
1. Create a simple java application program which calculates Grade of a student and push the source code to a GitHub repository(using MyEclipse). Configure Jenkins to pull the code from GitHub, execute and build, and upload screen shot of the output.

Sol:

-- Open Eclipse.



--

Java project for Grade calculation

```java
package abc;
import java.util.*;
Rename usages
public class Grading {  new *
    public static void main(String[] args) {  new *

        float grades;
        Scanner sc = new scanner(System.in);

        if (grades>=90) {
            System.out.println("A");
        }
        else if (grades>=80) {
            System.out.println("B");
        }
        else if (grades>=70) {
            System.out.println("C");

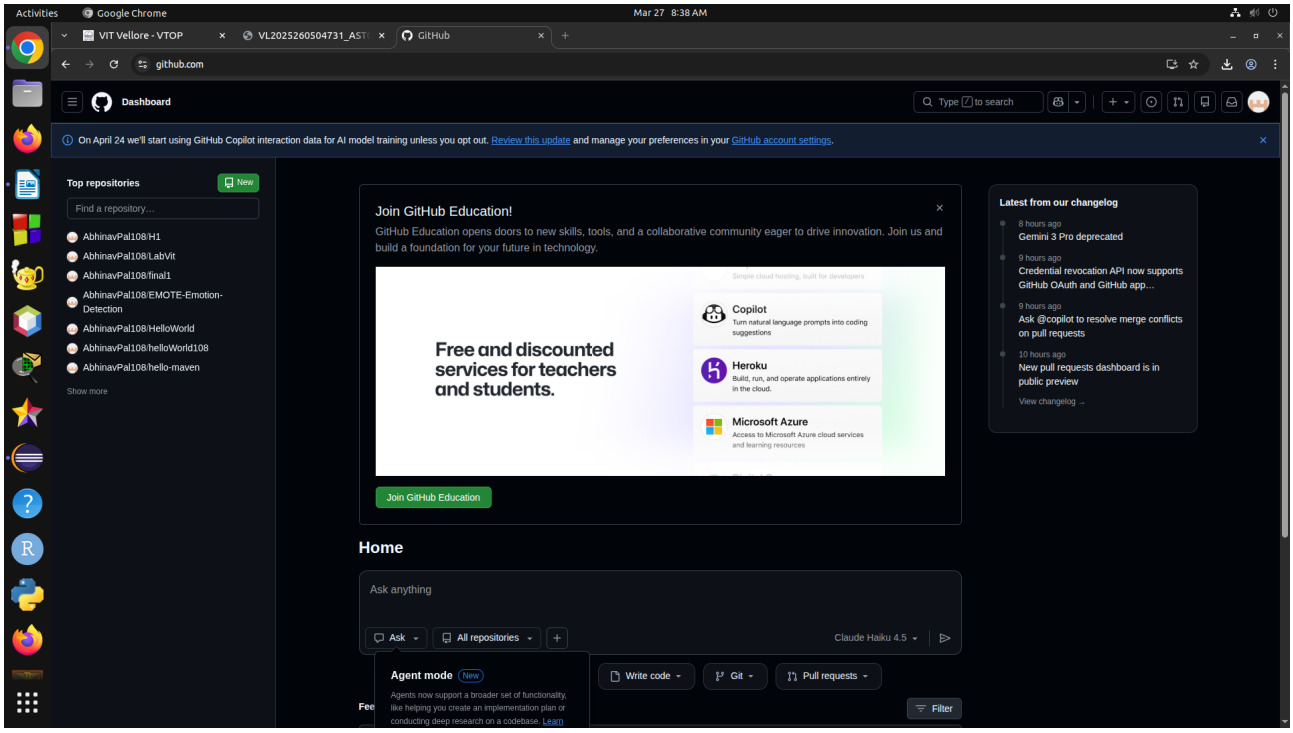
        }
        else if (grades>=60) {
            System.out.println("D");
        }
        else if (grades>=50) {
            System.out.println("D");
        }
        else if (grades<40) {
            System.out.println("E");
        }
        else{
            System.out.println("F");
        }

    }
}
```

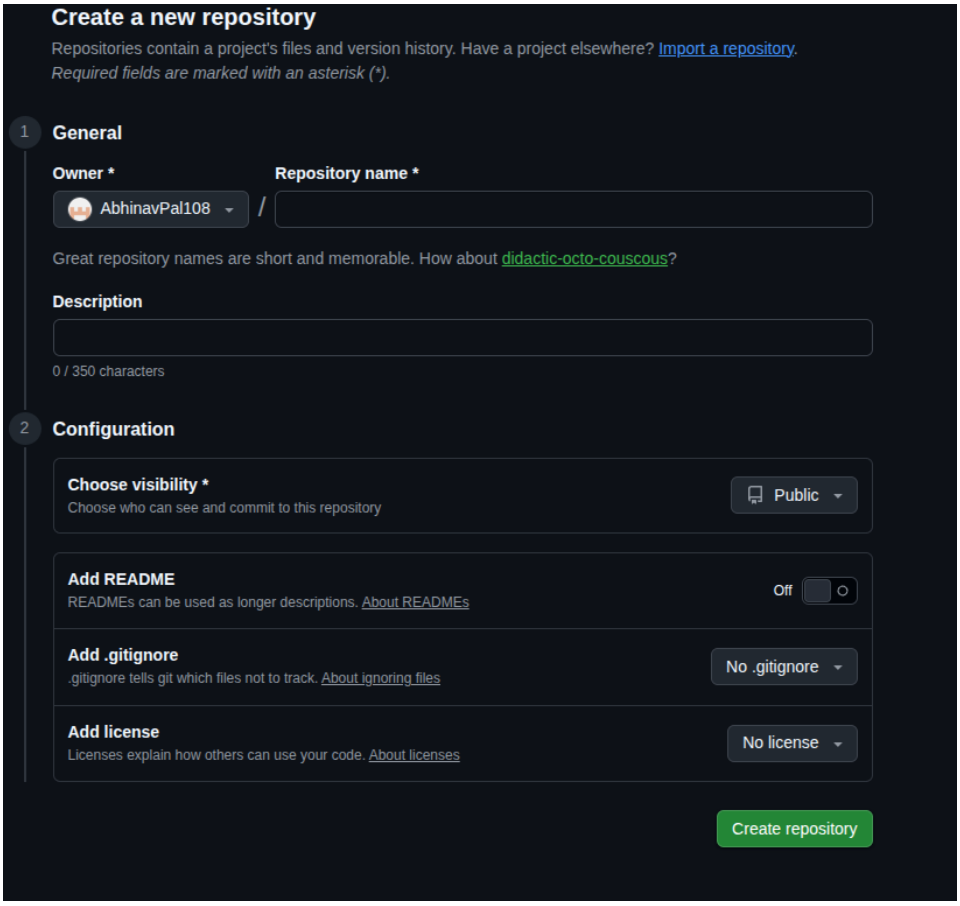
Downloa
Full Line
enhance

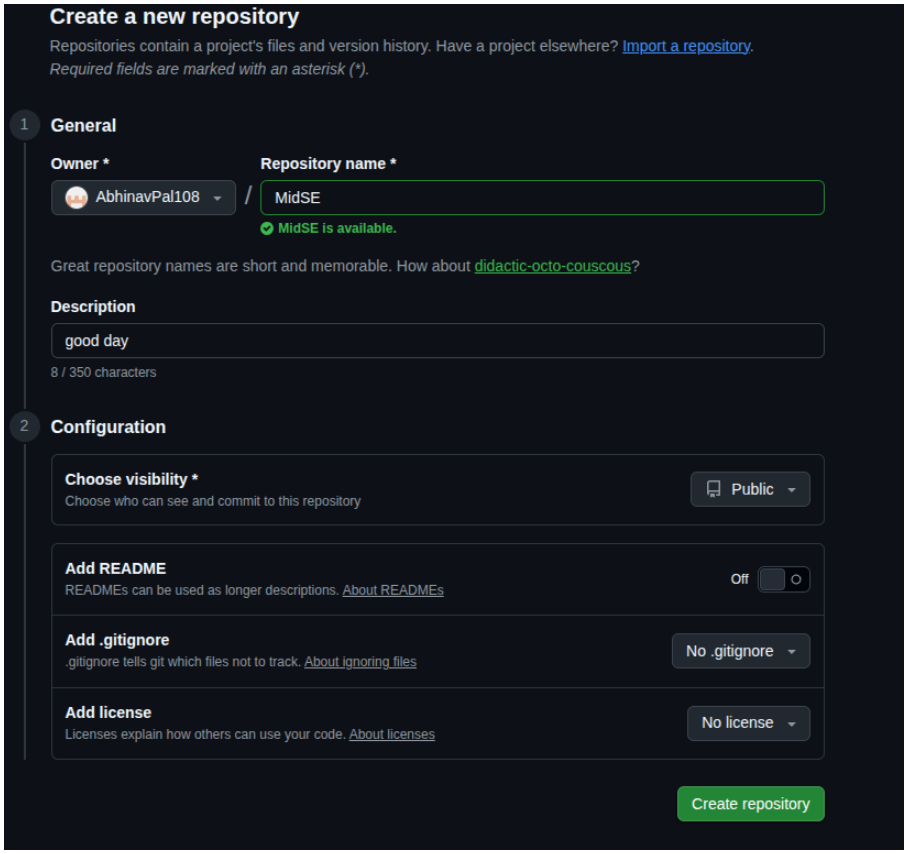
--GitHub:

-> Create a repository.



-

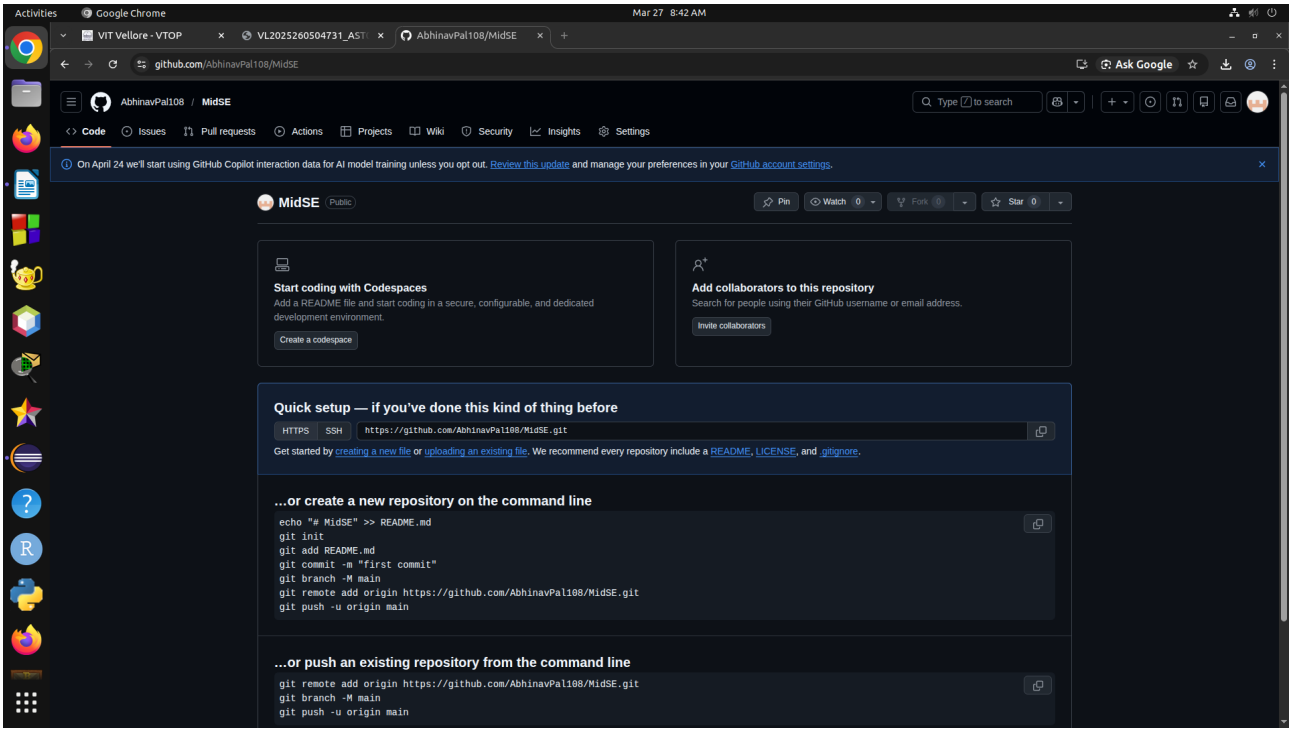




---Repository Created.

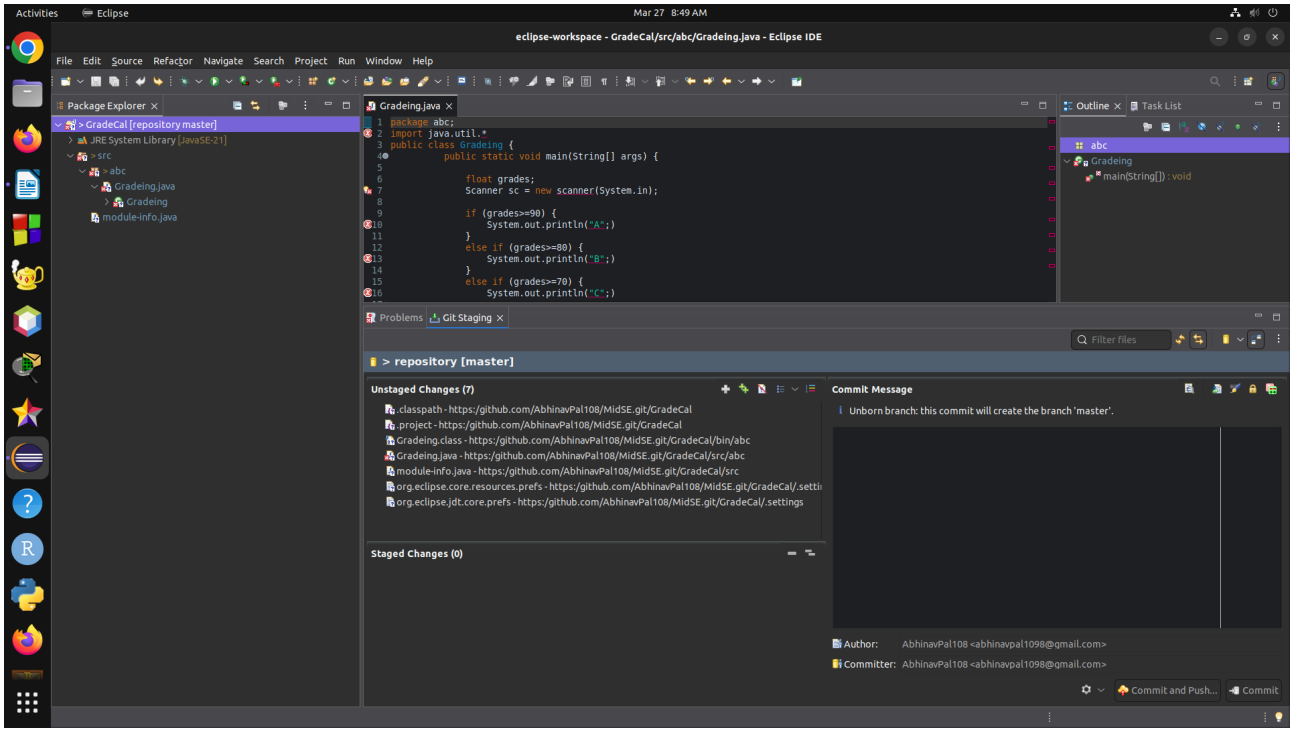
- Copy the repository link.

And go to eclipse and push the code.

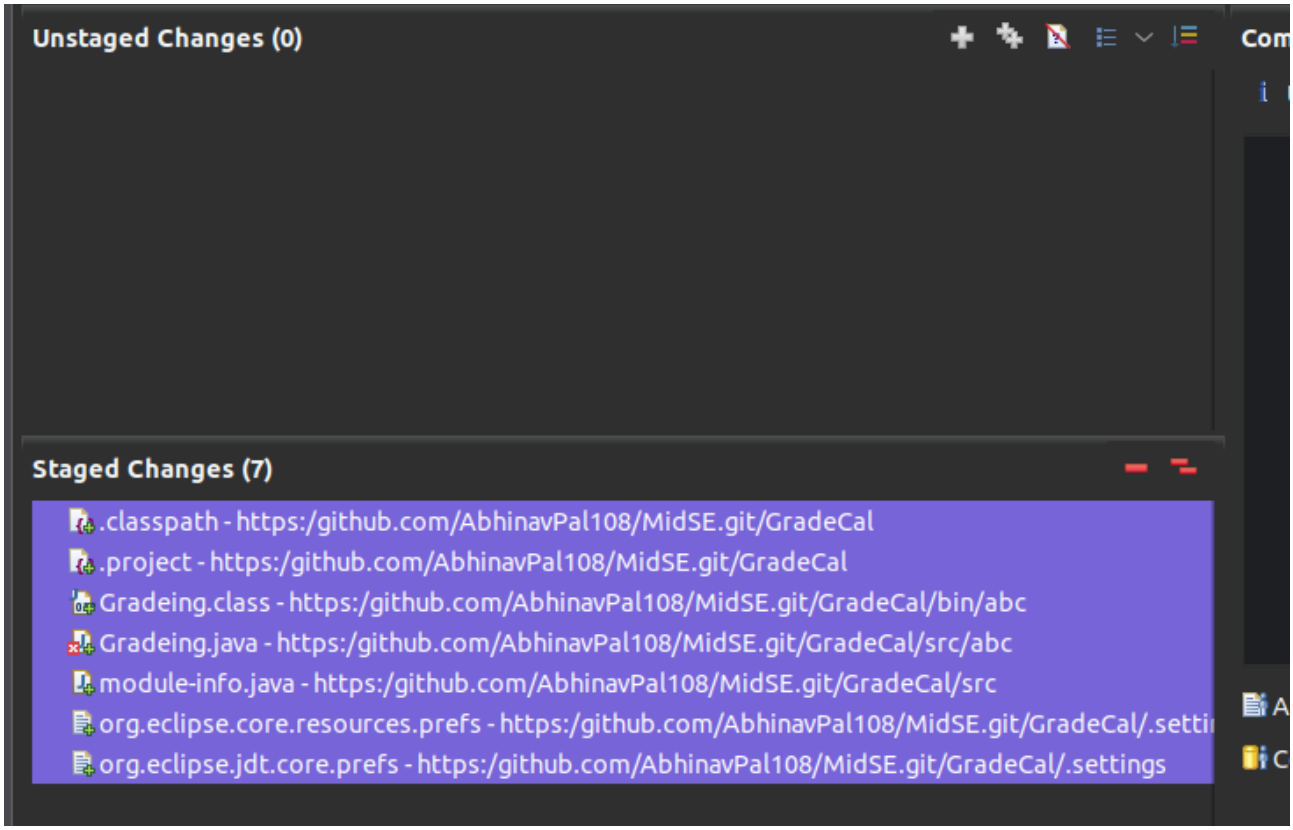


--eclipse

a. commit

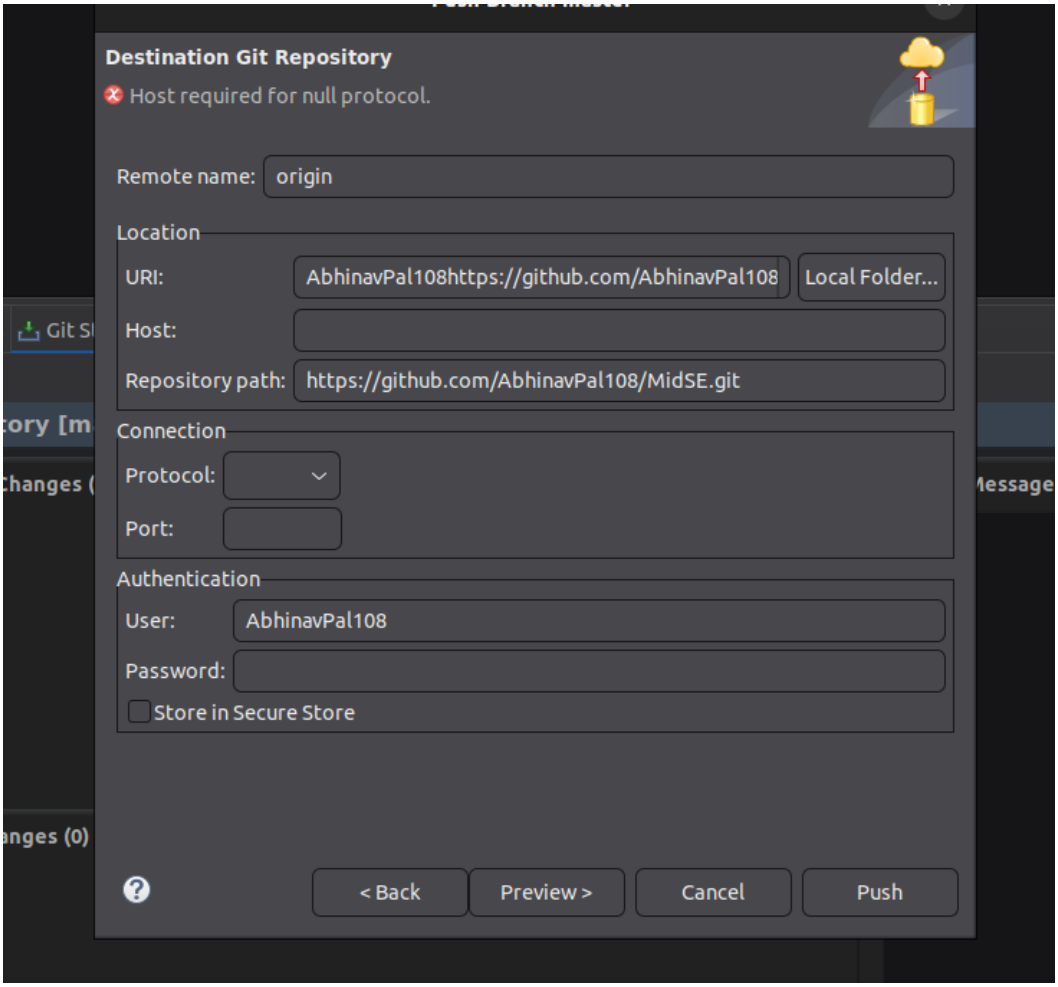


b. Unstaged to staged.++



c.
After commit give some message and push head.

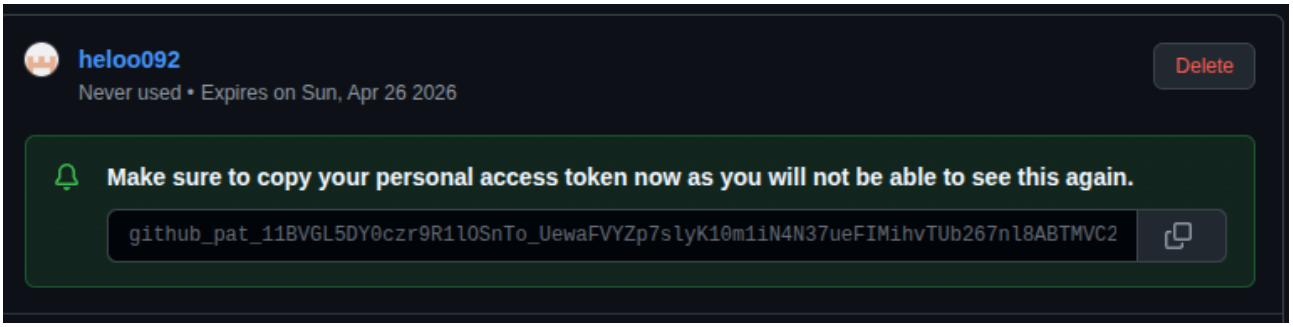
d. Paste the github repo link here and for password create a token in git hub



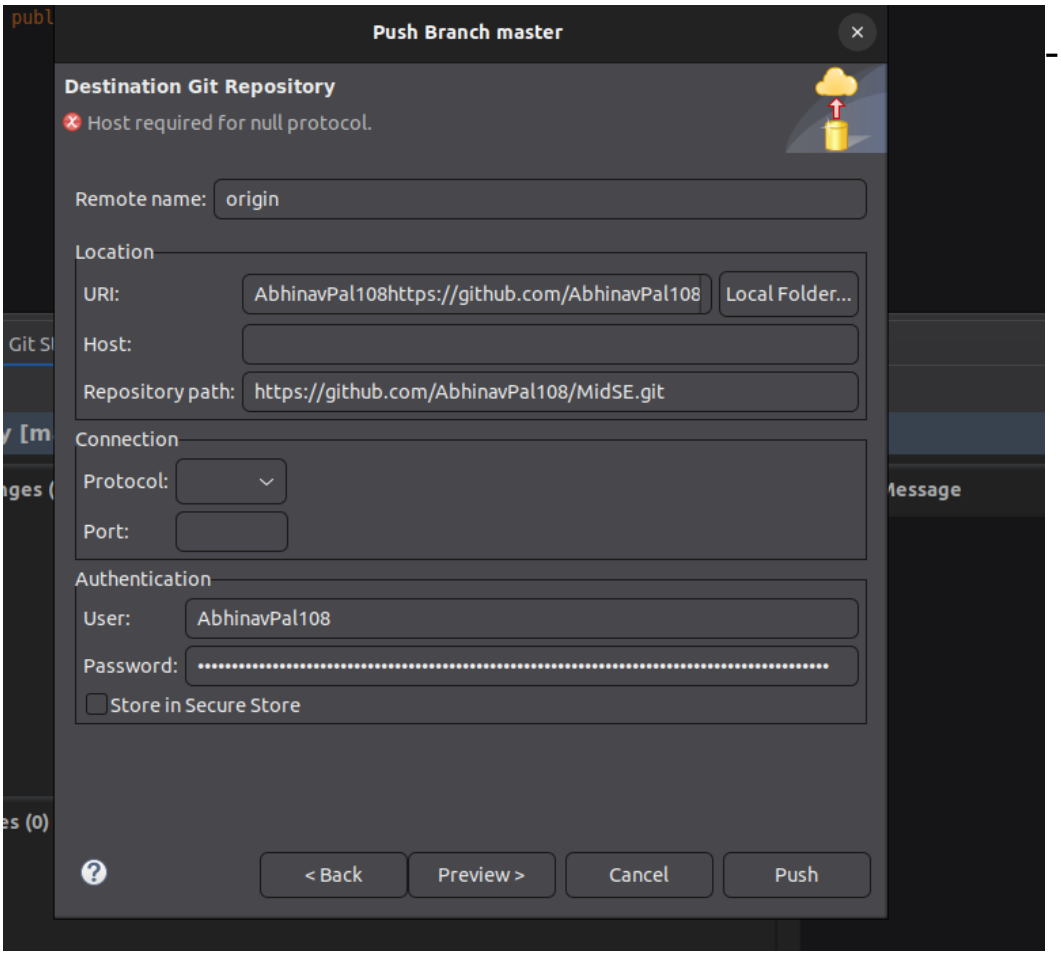
e.Create a token in GitHub

-- go to settings
-- developers setting
-- token classic

Create a new token and give desciption and paste in password.



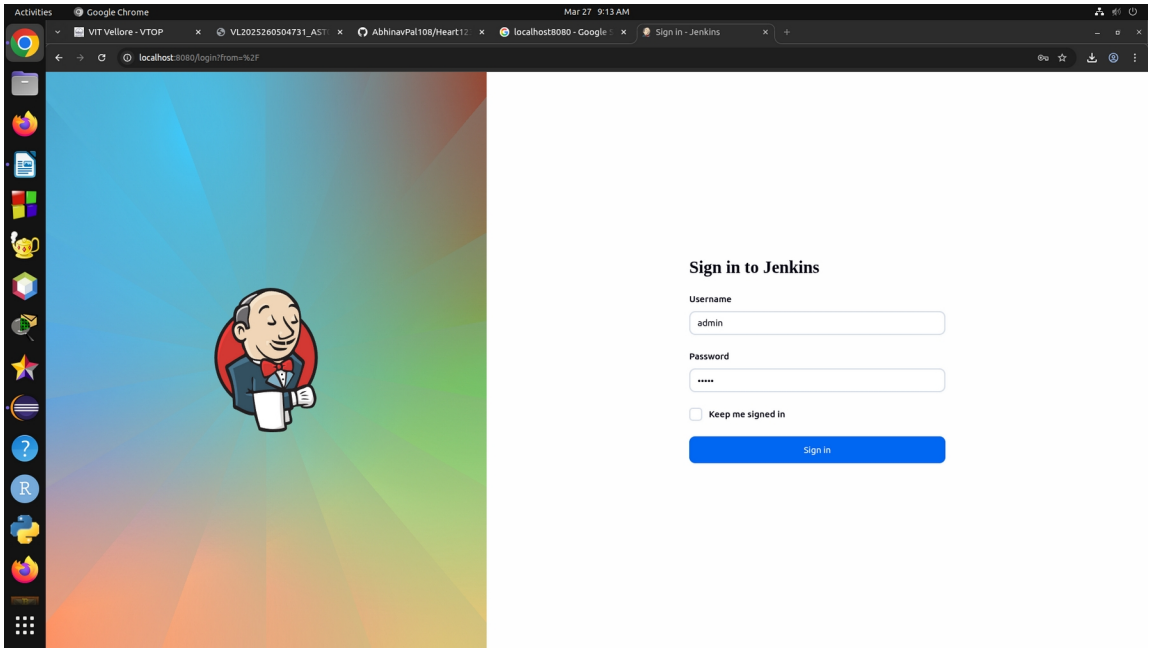
Copy the link and use as password



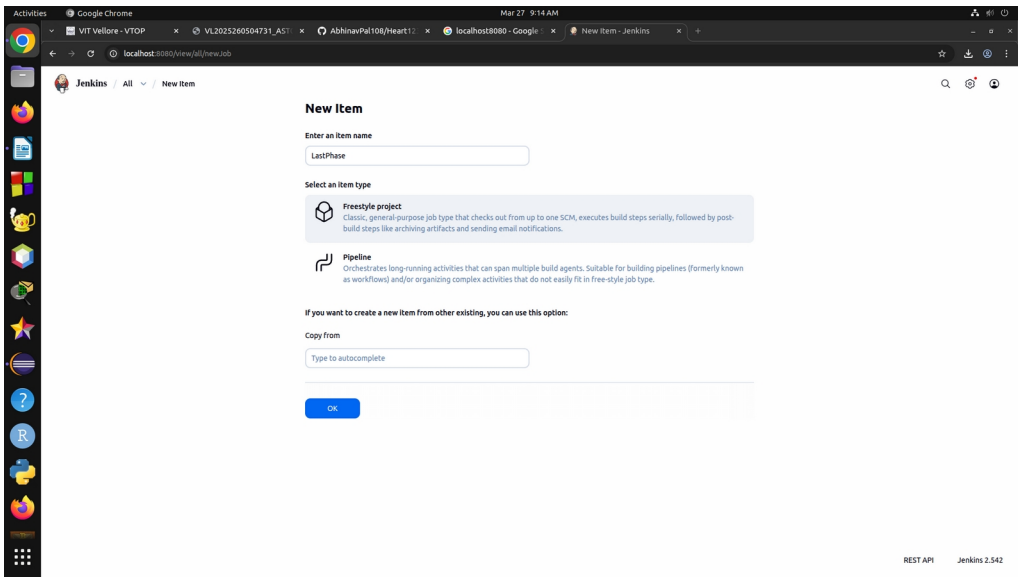
--

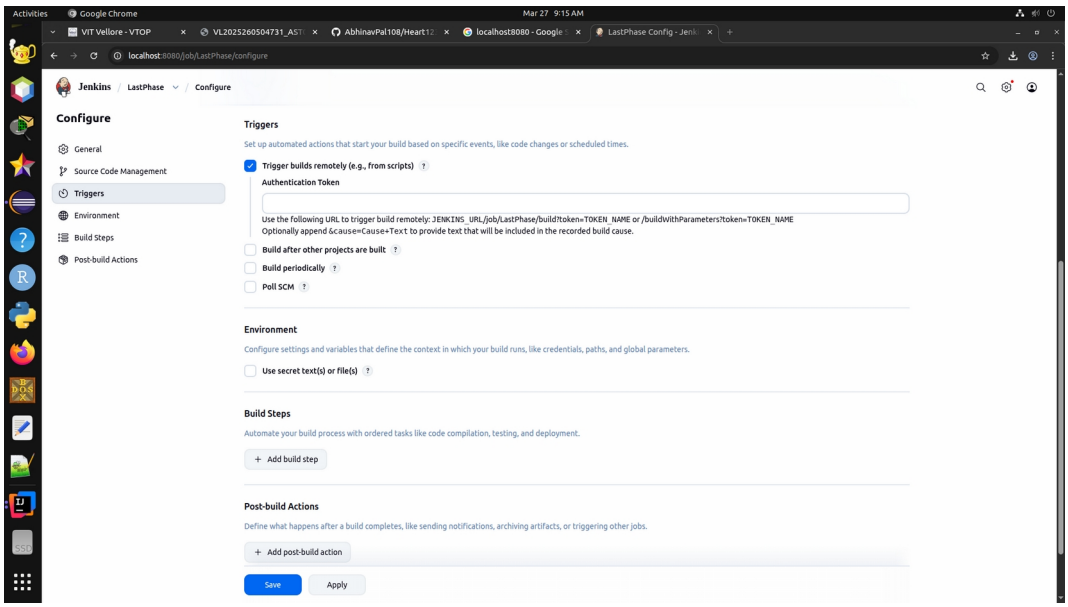
Project is pushed to GitHub.

Jenkins:
localhost:8080



-





--

Note:

Some plugin were not availabe.

Thank You
