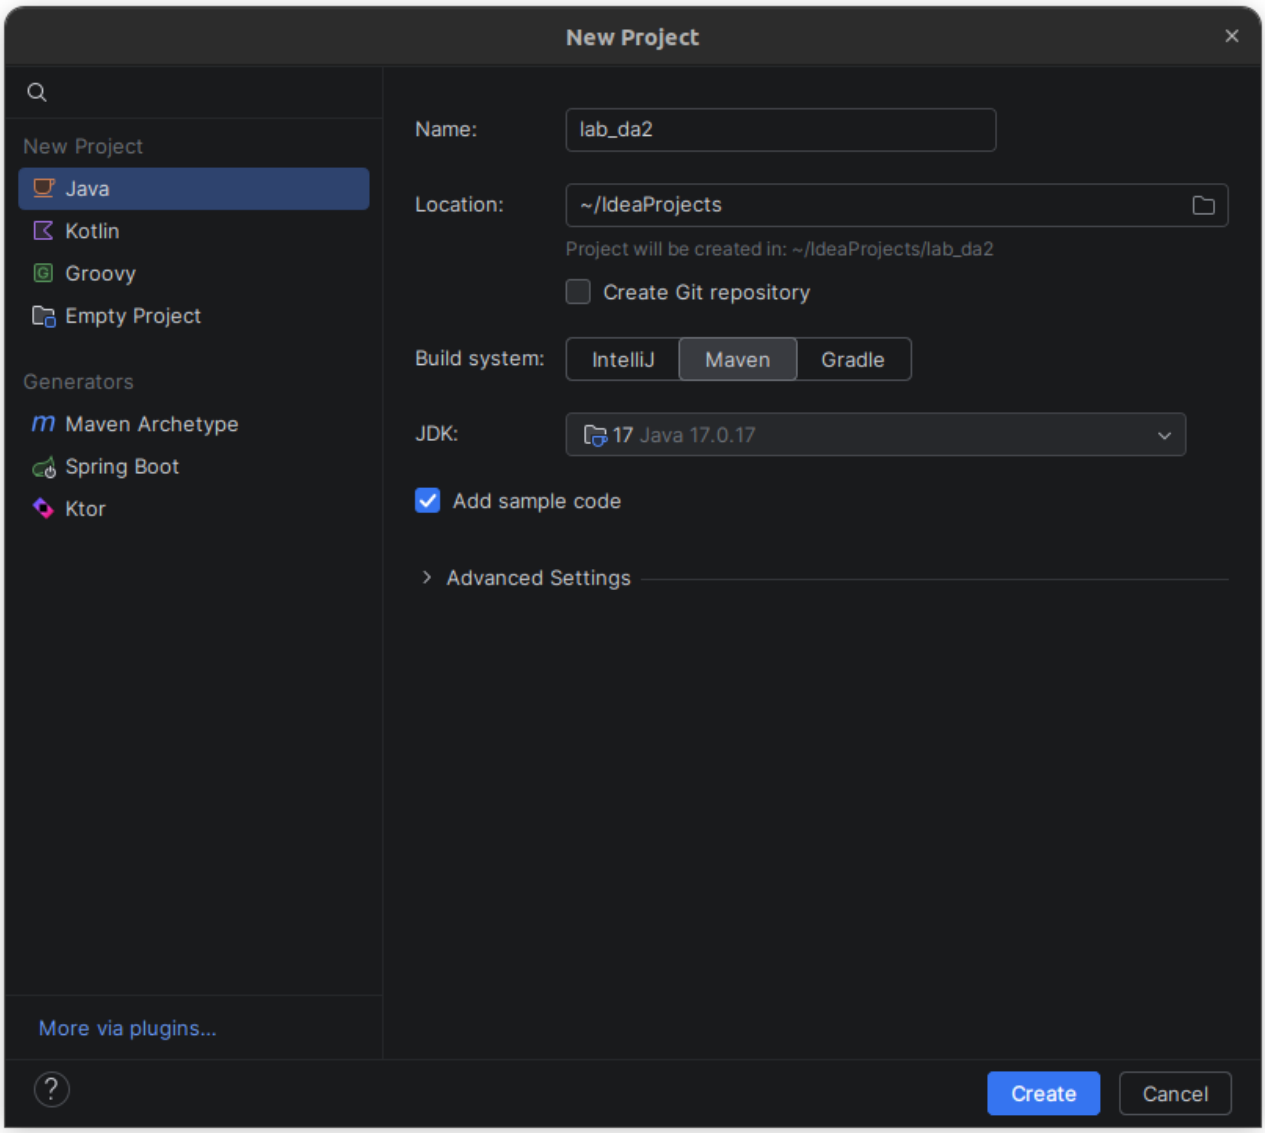
CSI3025 Application Development and Deployment Architecture
Lab Assessment – 2

Name: Meenakshi R S
Reg. No. 22MIC0056
Slot: L25+L26

Question. Create a simple java application program and push the source code to a GitHub repository. Configure Jenkins to pull the code from GitHub, execute a build, and upload screen shot of the output.

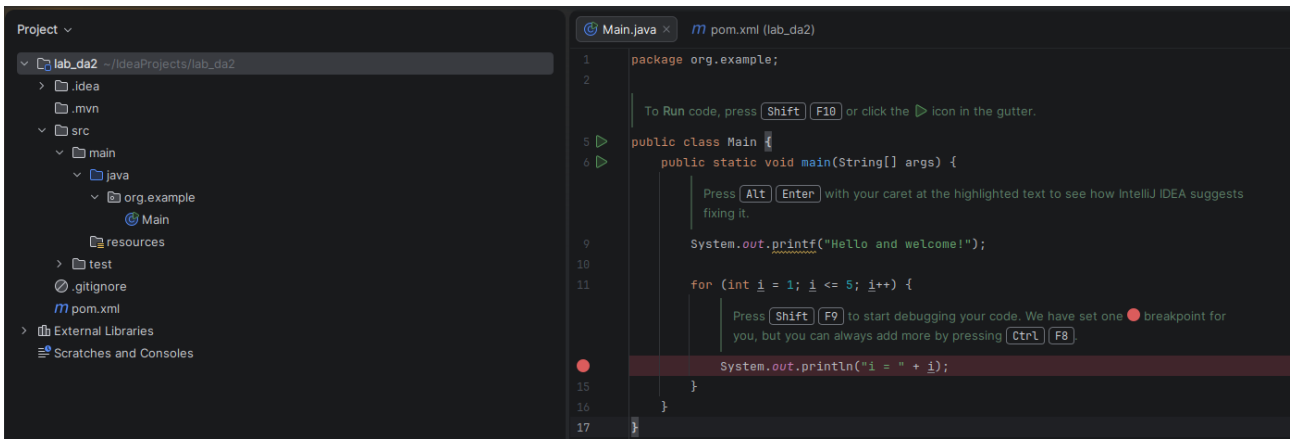
Answer.

1. Create a new project in IntelliJIdea (File -> New -> Project)

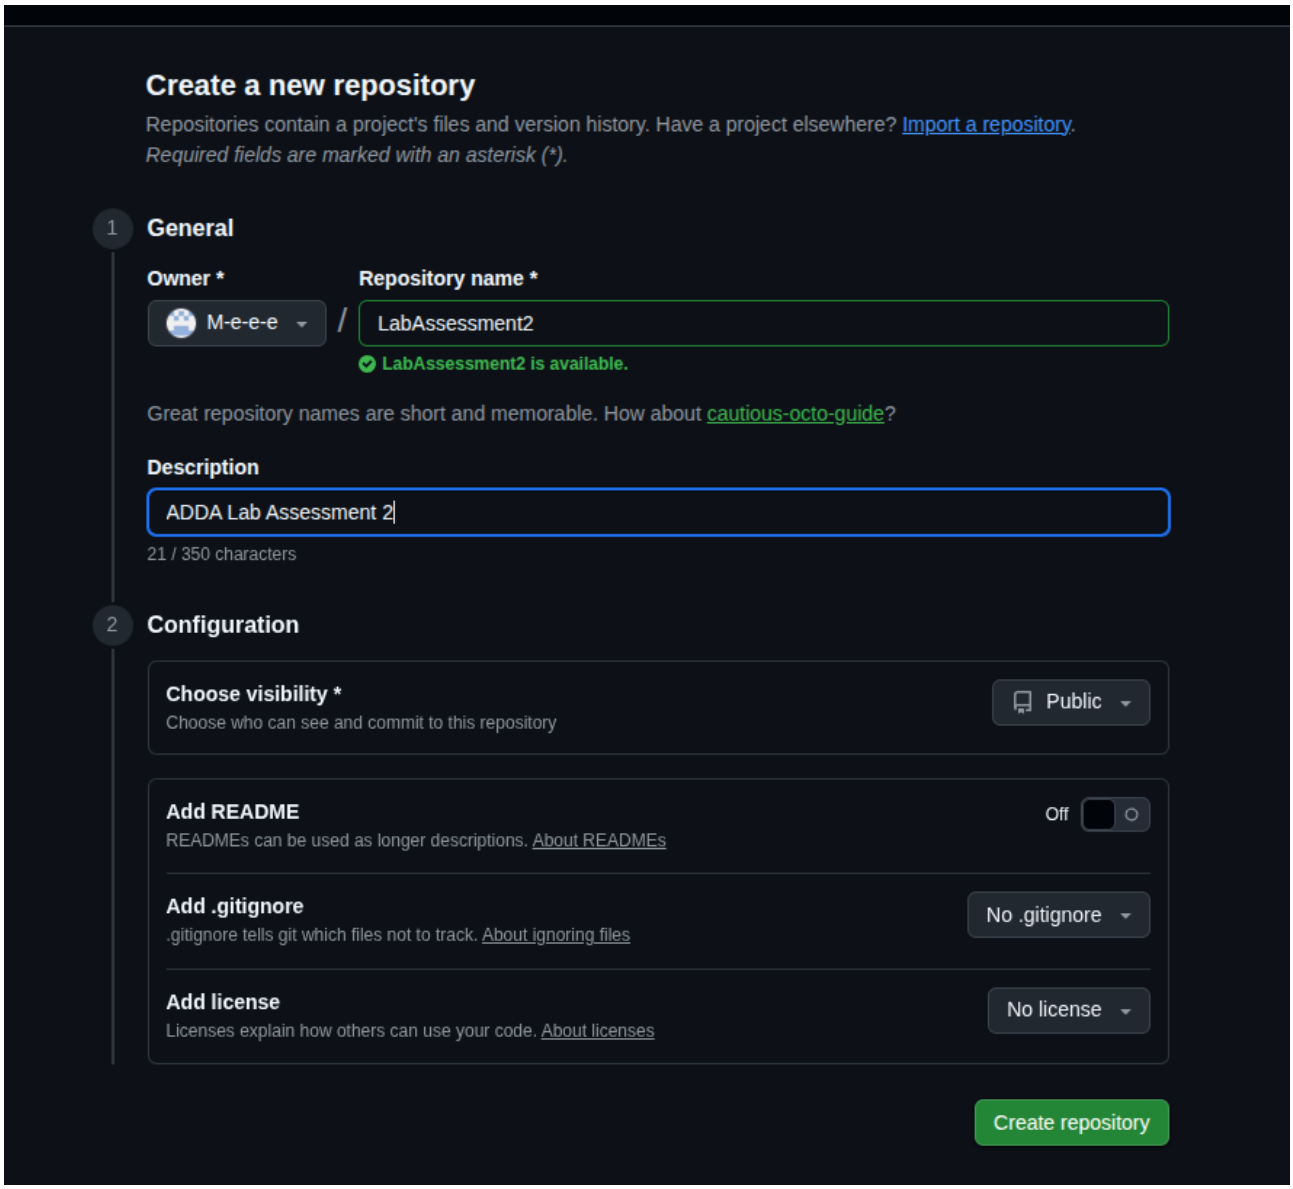


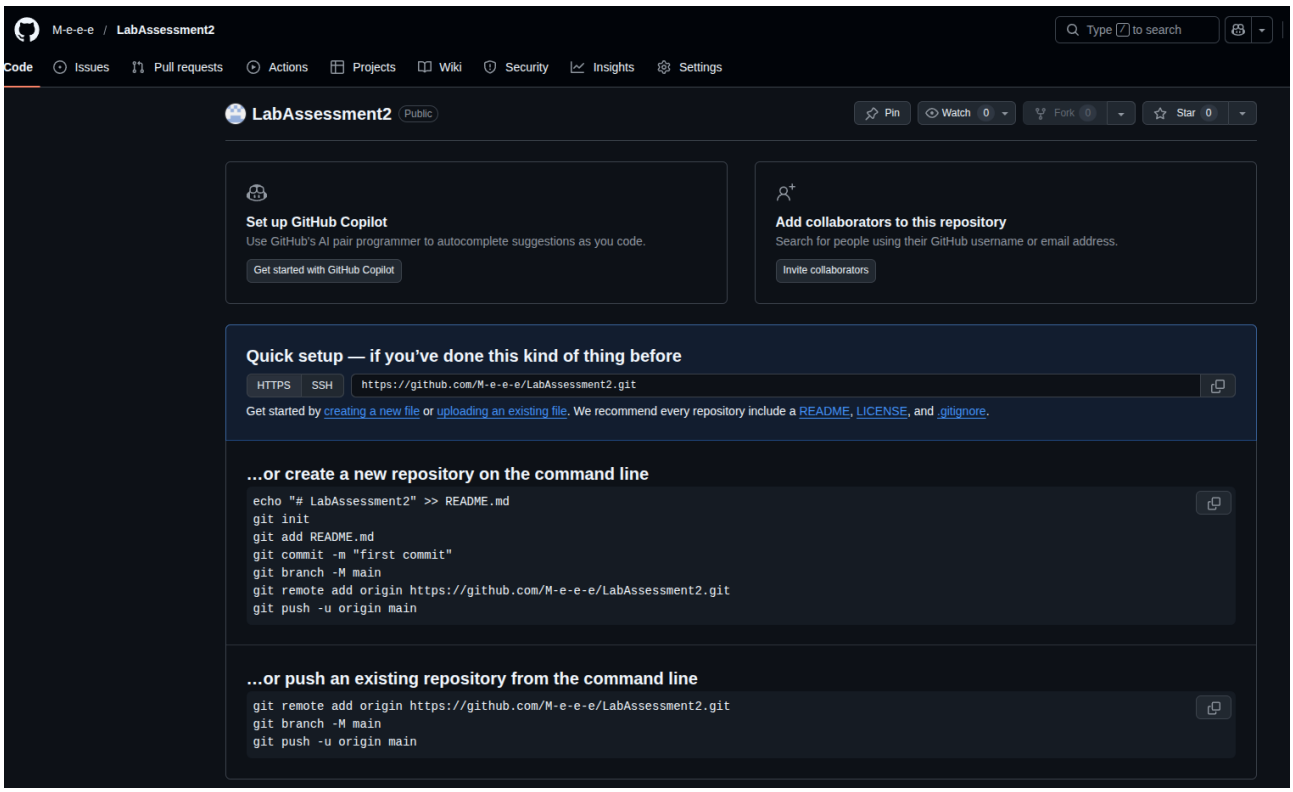
2. Click on Create and open the project in this window.

3. Write the Java code in Main.java. I have used the sample code given by IntelliJIdea.

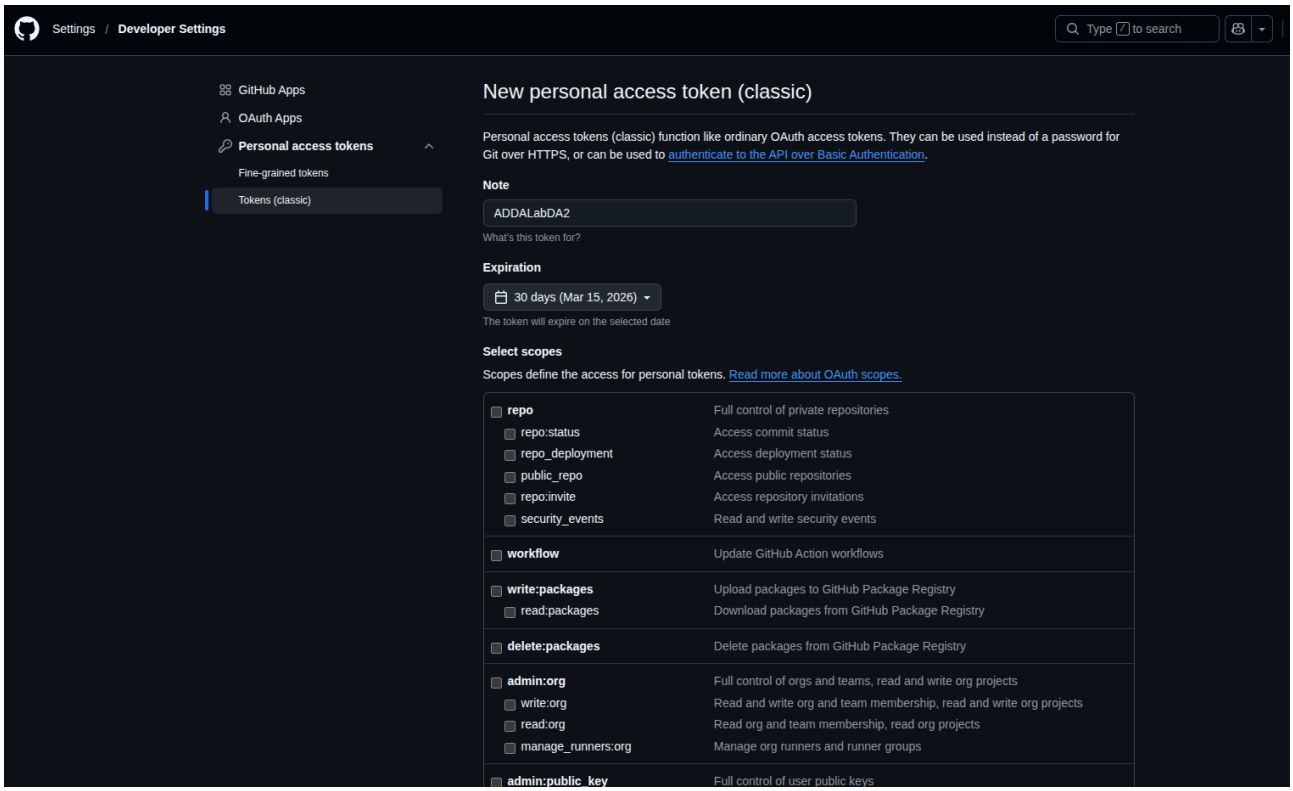


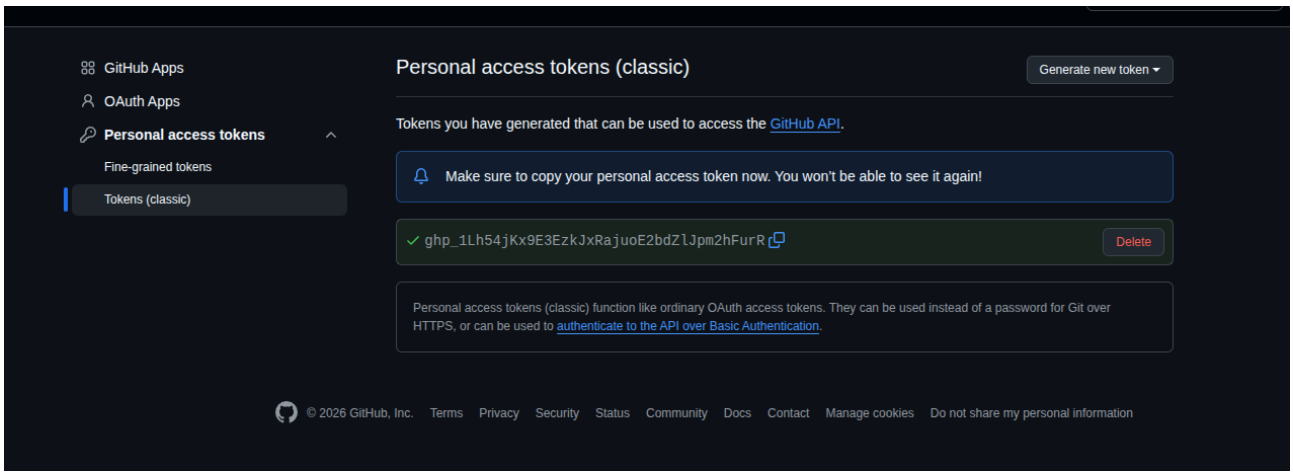
4. Login to Github and create a new repository LabAssessment2 (Click on New in Homepage -> Enter Repository name and Description -> Create repository). Copy the url of the repository.



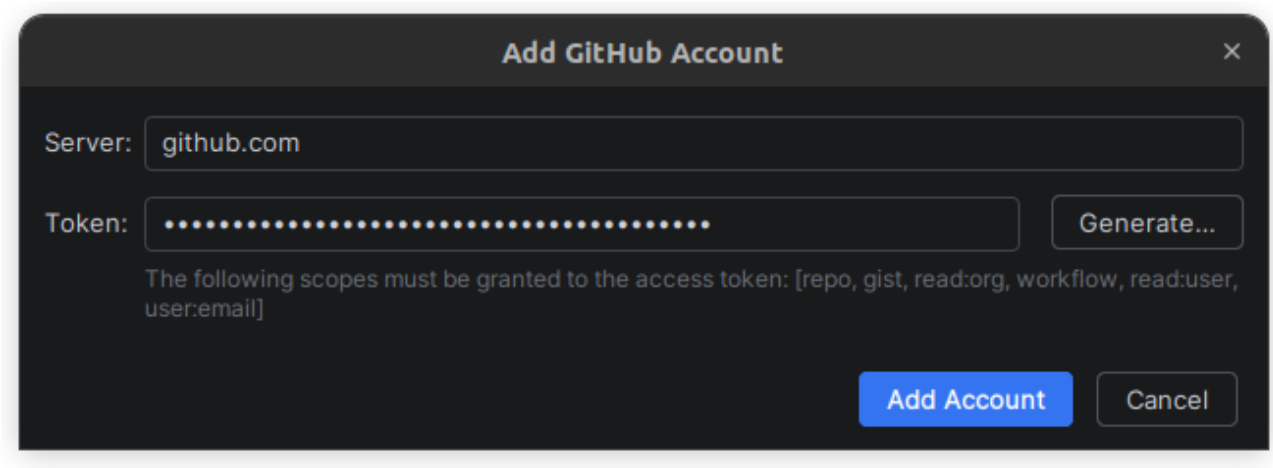


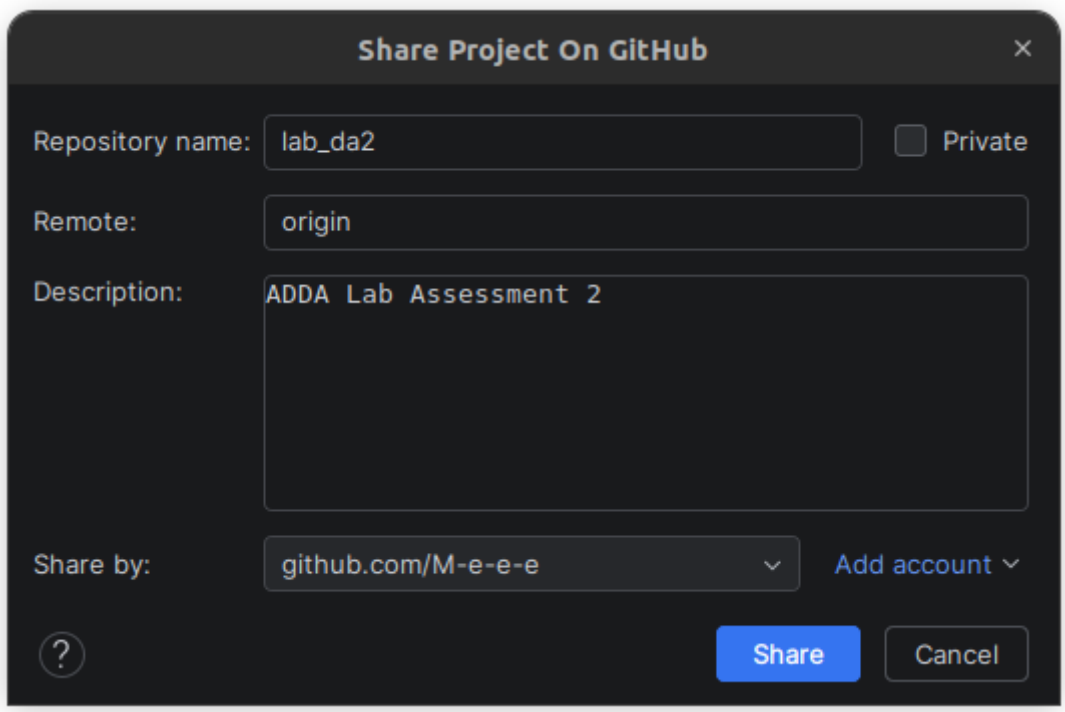
5. Generate a new classic token (Settings -> Developer settings -> Personal Access Tokens -> Tokens (classic) -> Generate new token -> Generate new token (classic) -> Enter Note -> Select repo as scope -> Generate token). Copy the token.



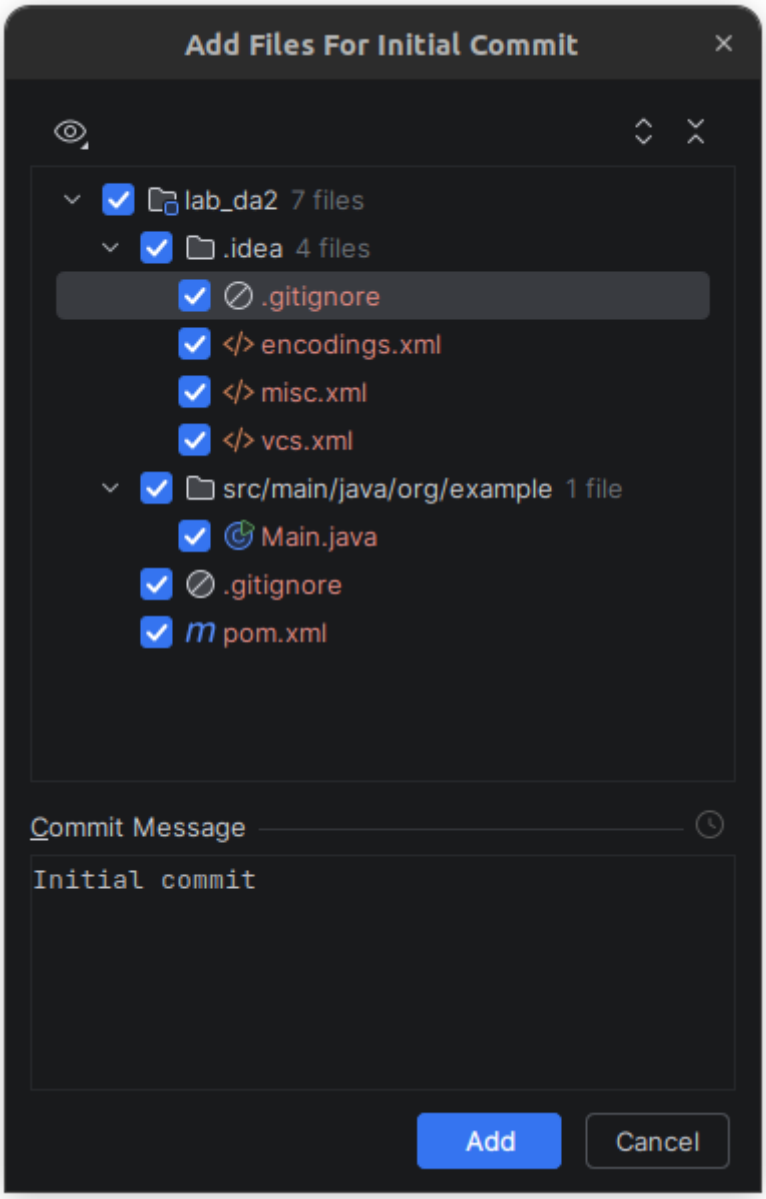


6. Click on VCS in the menu located at the upper left corner of IntelliJIdea and select on Share Project on GitHub. Select Share by -> Add Account -> Log in with Token. Paste the copied token here and click on Add Account. Then click on Share.

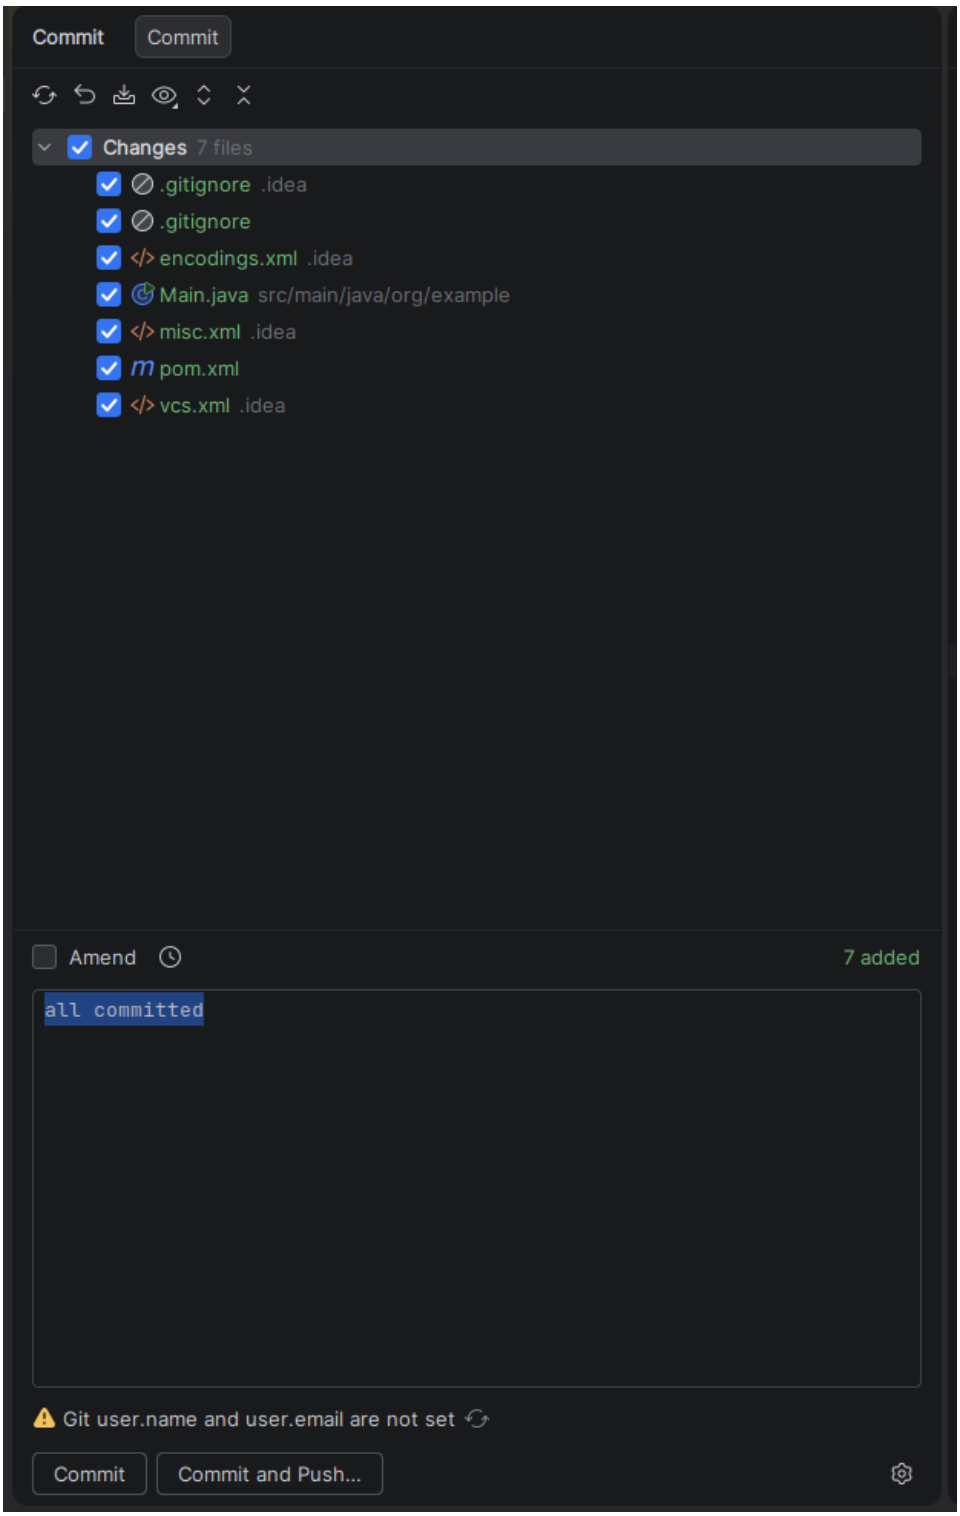




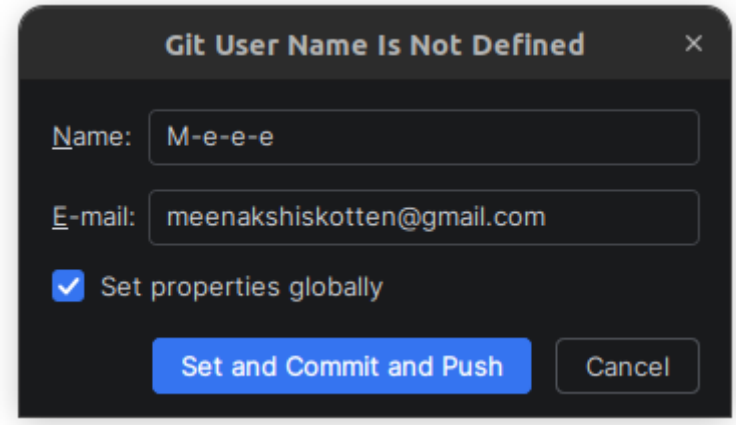
7. Select all files for intial commit and click on Add. This creates a new project labda2 in GitHub.

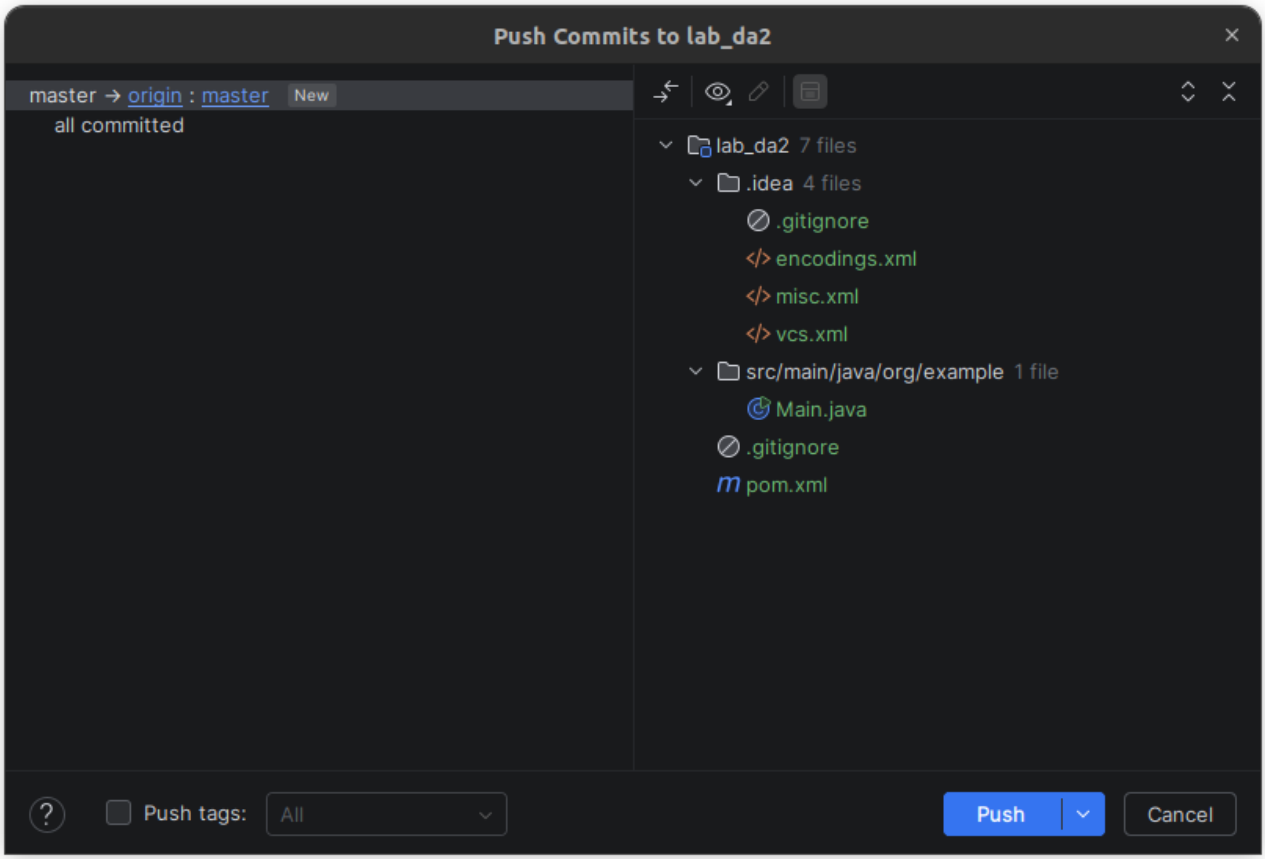


8. Click on labda2 -> Master -> Commit present on left hand side corner of IntelliJIdea. Write a commit message and click on Commit and Push.

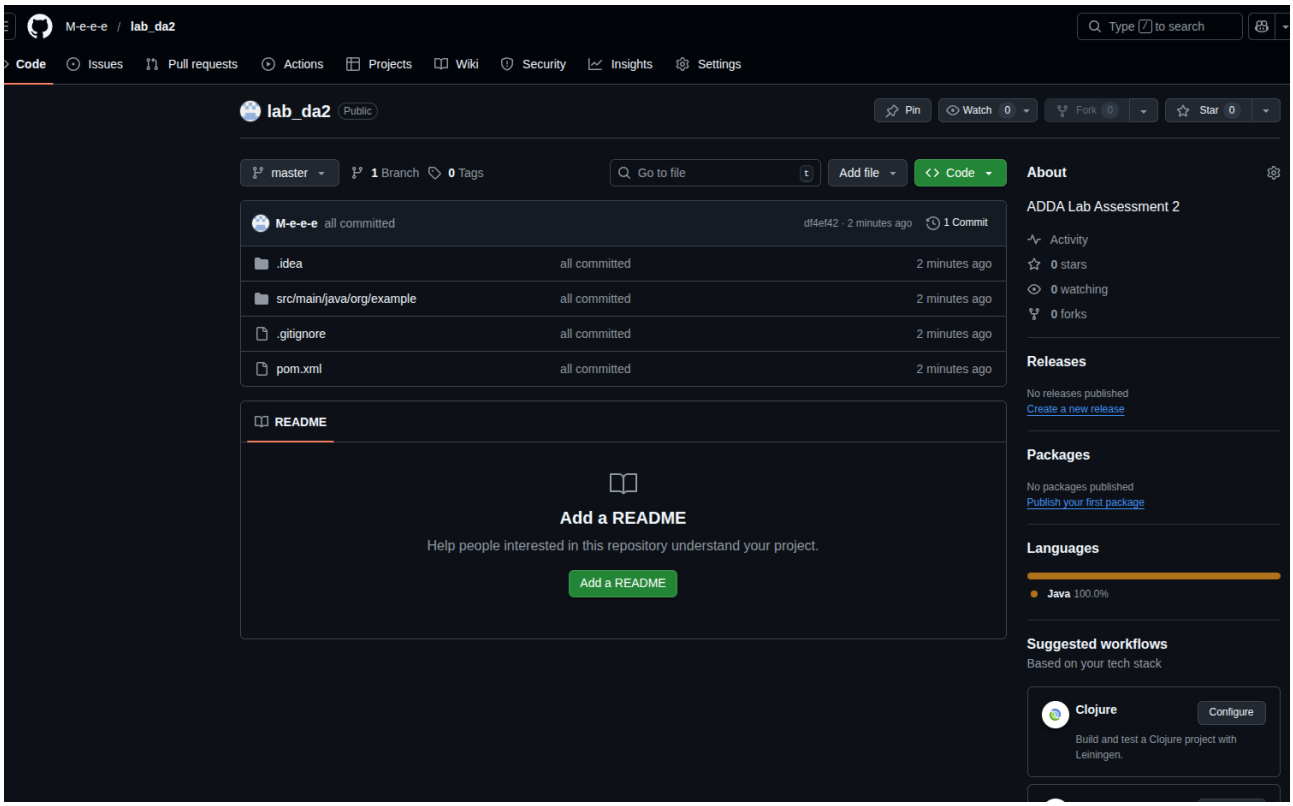


9. Set Git User Name and Set and Commit and Push. Push all commits.

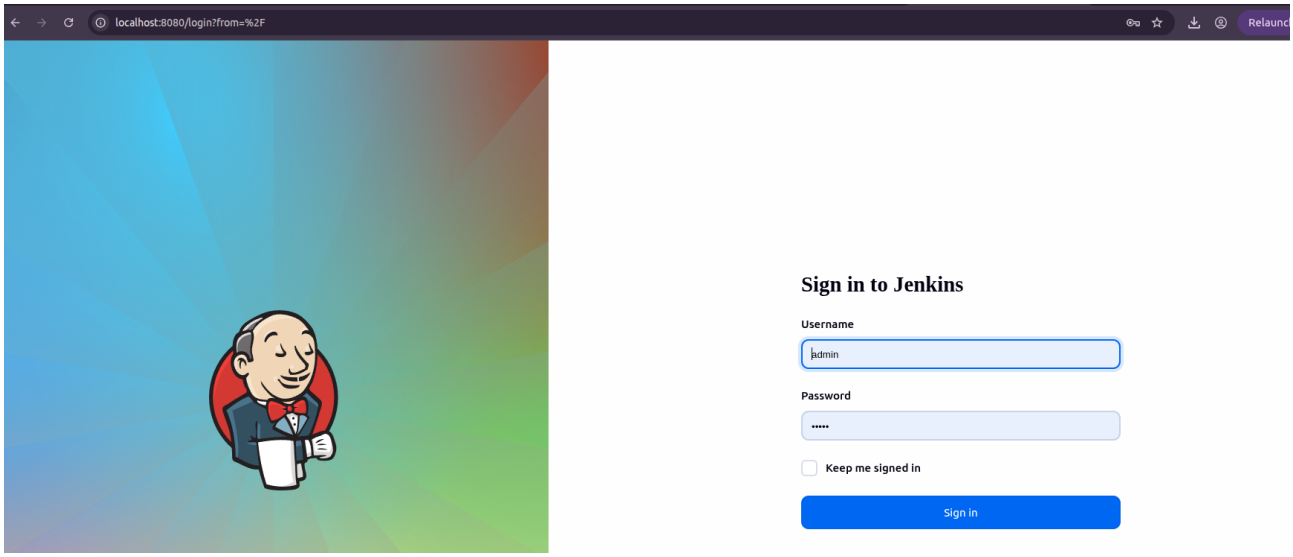




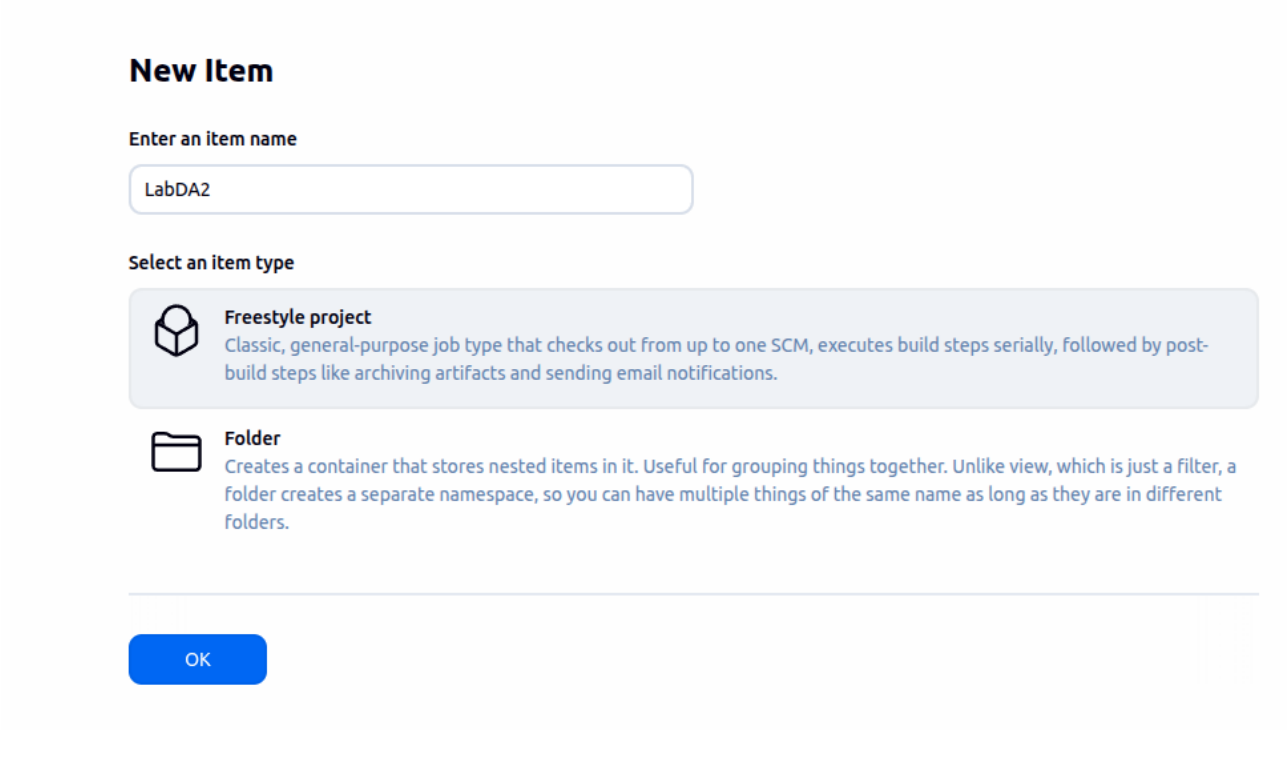
10. Now you can see your project in your GitHub account.

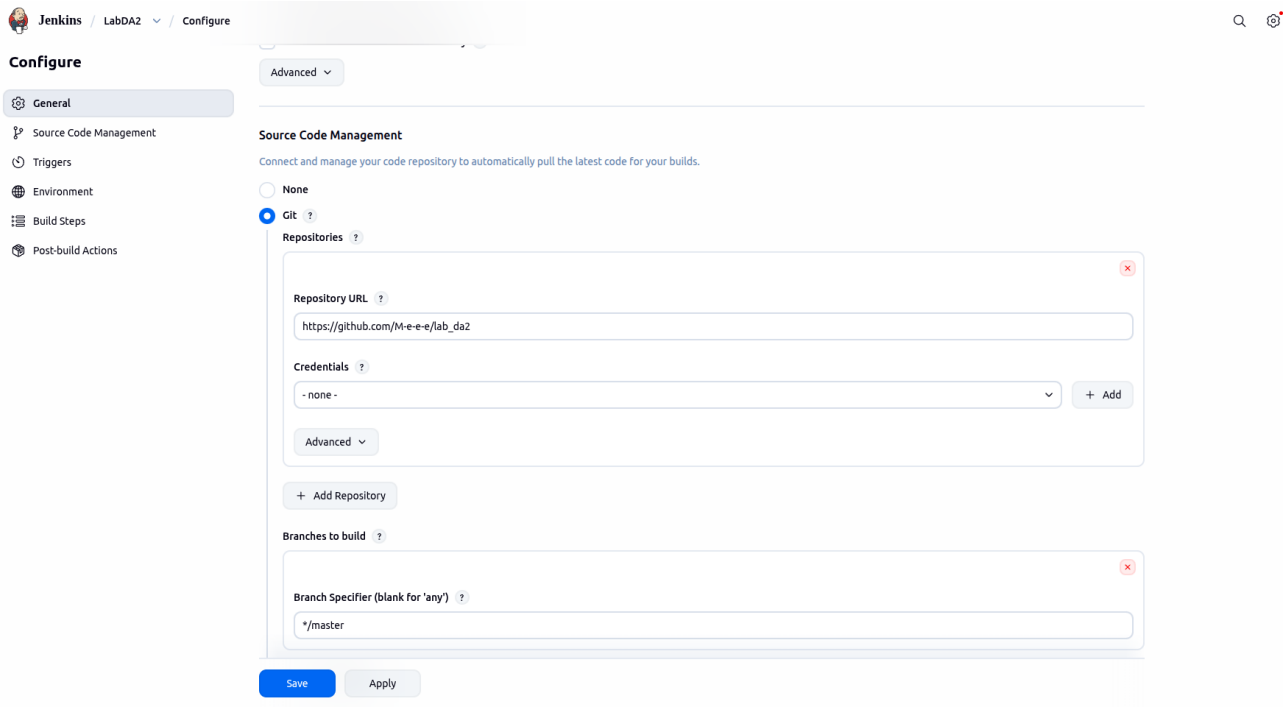


11. Open Jenkins. Enter username and password to sign in.

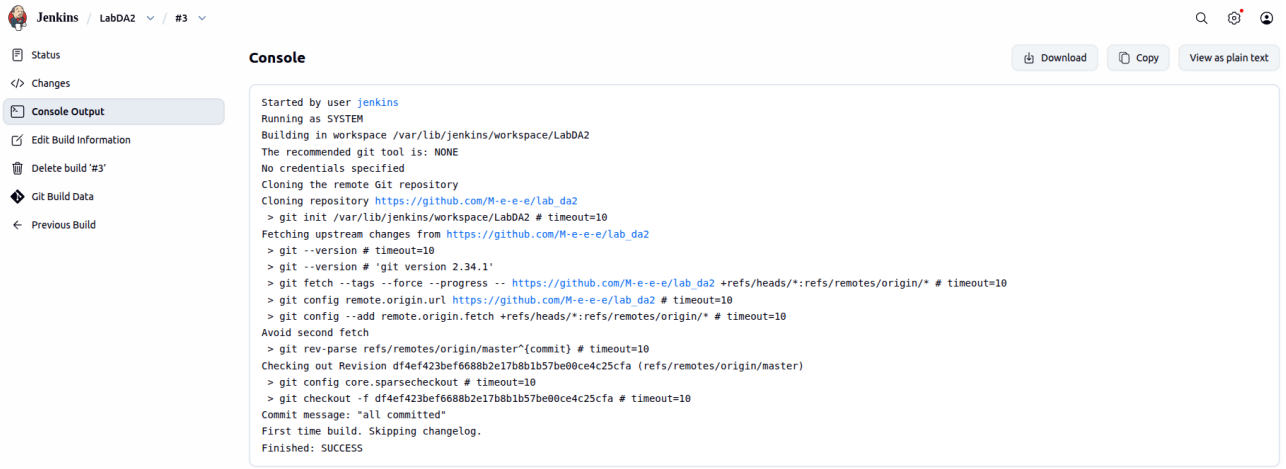


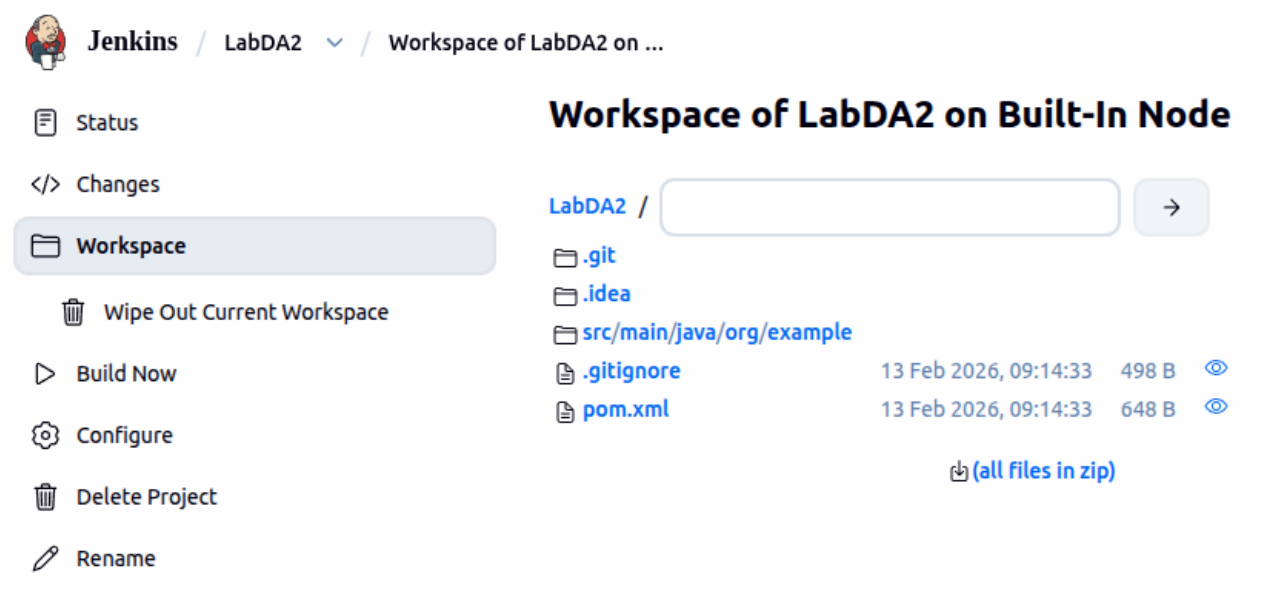
12. Click on New Item -> Freestyle Project. Add Git Repository URLin Source Code Management and Save it.

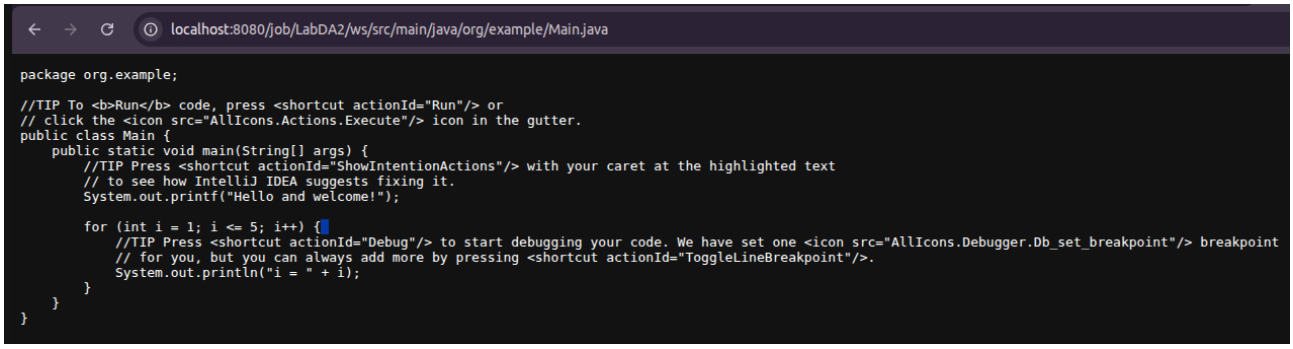




13. Click on Build and check out the Console Output to see the Build Output. It is a Success.







14. Now you can view your Java code (Main.java) through Jenkins.
